I respect it man. its some nice work, very slick design to be honest, and having it just look good on all 4 colors, its a chill work, bring out the spookiness if you ask me HAHAHA

no no, i mean i sound like a dumbass, cause i didnt fully understand the very first post, no no i misterpereted and thought you made the header but its was noivience and once you showed me your work i felt like a dumbass cause i thought it was your work but the one that you did was the one you showed.

In the end man, not you but me.

But also wanted to mention, yes your header looked simple and clean and slick too, with that halloween spirt but i guess it was missing the tech side in a way? since in the current one everything seems to have that little tech motherboard aspec, yours was more of spirt in a way you feel?

Next time just saying when another opening does happen, kill it with a little tech flow design?

He just said he had a years worth of Novica's holiday designs that he likes to use since Novica has done so much for the site.

He told me he'd use mine next year though, so I guess I just need to hope Novica doesn't break my heart 2 years in a row. xD
