Thread: [What is hVCN, RAT, Botnet ?](#)

Narut0 - October 18, 2019, 2:11 pm

I'm in HF for a couple of months, I do my research own. I need your help at some point. I want you to help other friends with your knowledge and imagination.

Before asking my question, let me share what I know about them. hVNC is like a Teamviewer program but it runs sneaky. RAT(Remote Administration Tool) have the opportunity to gain control all process of the computer. I know botnet is a lightweight version of RAT.

What is the difference between hVCN, RAT, and Botnet ?
Do they have any different types?
Can they combine with each other?

Imagine, If I want to create a Botnet(or collection of computing). What will be the best options for my Botnet Dream :)

I am open to any comment, you can criticize. Please, don't judge. Thanks.

HVNC- is hidden VNC connection on computer victim and your botnet (or HVNC tools)

RAT - Remote Administrator Tools , its software that allow you control computer (locally hosted)

Botnet - Is Http C&C panel botnet (can be any sort of botnet Loader,Stealer ...)
