Thread: [HTML miral library <repeat> tag](#)

**blackcoder00** - October 20, 2019, 10:27 am

miral library

The new tag repeat miral library (adds lots of additional functionality to html5)

I'm curious how you implemented the logic to do so, following this thread:

<https://hackforums.net/showthread.php?tid=6012778>

If it's anything like the code you posted there, I'm afraid to say you'll have lots of people complaining about various bugs and glitches not to mention it's entirely wrong to handle it like that ? .

Anyway, this doesn't appear to be the right section for your application anyway. Either this is still a Java application or you rewrote this in something else. Either way:

<https://hackforums.net/forumdisplay.php?fid=131>

Edit: Delphi/Object Pascal it is:

Interesting. So you're compiling it down to HTML? I remember you posted another thread a while ago, how'd you go about it after our suggestions?
