Thread: [Stop meddling with Spotify premium methods, download your library as MP3s!](#)

Aznar - October 20, 2019, 11:57 am

Getting what you need:

1: Download DeeZLoader APK from [Release master Nick Filmer / DeeZLoader-Android GitLab](#)

2: Download Firefox for Android. You'll need to install two plugins, one to change your user agent and a cookie manager to find your Deezer login token for the DeeZloader app.

You'll need to change your user agent to any desktop client, then login / create a Deezer account. Once you're logged in use your cookie manager to find your login token by searching for "arl". There should only be one value returned, copy that and paste it into the DeeZloader login screen.

Congratulations, the trickiest steps are out of the way.

Next, head over to [Transfer Playlists Between Music Services! 100% free | Tune My Music](#) to import your Spotify playlist / liked songs to your Deezer account. It's a pretty intuitive process, I have faith you cool cats can do it without a guide.

Once your songs are imported, you can start downloading them through DeeZloader. You'll have to navigate to your playlist you imported using the hamburger menu on the right. All your music will be saved into folders with the playlist name in your default Music folder on Android.

Congratulations, you're done.

thanks for this, I am hoping there's an easier method though. I remember in the past using a method where you create a server on your pc and then can directly download from spotify using it. Don't think it's working anymore though sadly

Same idea, easier steps on PC. There's a version of DeeZloader for PC on the GitHub page I linked in the OP.
