Thread: [Building Maze Admin](#)

H4x10r - October 22, 2019, 11:48 pm

Hey there,

want to build the project, but seems to be not so easy.
someone who can help ?
would be nice !

<https://github.com/MazeAdmin/Maze>
(is the old Source from Orcus remote)

Would like to work on the project but not even able t build .. :-(

If you know how pm me , willing to pay for a sol.

According to the project site

PHP Code

<?php

Build using Fake: fake build (execute this in the root of the repository).

If you don't have Fake installed, you can find instructions here.

[Fake.build](#)

Is this the issue? Ate youn building with fake?

H4x10r - October 23, 2019, 6:16 am

i have fake installed its more net core related or so
you need to install fake netcore3.0 and win8.1 sdk as far as i know
the struggle gets real when try to pre execute the fake build in the root
it throws some errors , will post later !

running win10 vs19

Error after fixing the powershell prebuild remote desktop funktion.

c:\program files (x86)\windows kits\8.1\include\um\winnt.h(31): fatalerror C1083: File (Include) cant
open file: "ctype.h": No such file or directory
[C:\Users\Builder\Desktop\Dev\Codes\Maze\src\modus\RemoteDesktop\libraries\OpenH264net\Ope
nH264Lib.vcxproj]

But win.81 sdk is installed

Make sure you have the Windows Universal CRT SKD installed aswell
you can get it from the visual studio installer.

I was able to build the administrator and the server but when it gets to compile the submodules i get

to the same error as the last dude shows here

<https://github.com/MazeAdmin/Maze/issues/7>

The TreeViewEx fails to build, although i am able to build it when I open it from visual studio 19.
will have to look at it again later

? ? ? We are getting near , thanks will try today to get to the point where you are.

please give full details to the setup

all the other mentiont sdks are also needed and netcore3 ?

thanks man

Got the same error now !

strange

FIXXED !

PM FOR INFO
