Thread: [NEW mentions/tagging system and how to properly use it!](#)

Cooligan - October 23, 2019, 3:02 pm

So as most of you are aware by now, we have a new mentions/tagging feature on HF! Something that was long awaited and is finally here.

I noticed that many users are finding trouble getting the grasp of it, so I figured I'd make a [Quick Thread](#) highlighting the uses and what each one does.

CURRENTLY, there are two ways of tagging a user. Now, each way will in fact tag someone, however if for some reason you want to mention your own username and you don't want to get the notification for it, use the [mention=UID] method and not the @username@ method. Using the @username@ method will in fact send you a notification if you tagged yourself, and the [mention=UID] method will not.

- 1.) [mention=UID] <-- replace "UID" with the actual UID of who you wish to tag.
- 2.) @username@ <-- same thing, just put the username of who you wish to tag. (easier, more convenient)

How it looks:

Code [mention=(777)] <-- no parentheses
will turn into:

[Cooligan](#)

Code @Cooligan@

will also turn into:

[Cooligan](#)

I hope this thread helps and if you have any questions please feel free to ask.

Also check out [mention=] 's thread regarding feedback on the new mention/tagging feature, here: <https://hackforums.net/showthread.php?tid=6018733>

Forum wise it's the same as any other; various sections for various topics.

However HF does have MANY features that other forums do not.

Like: the Hack Game, a Contracts system for our marketplace, onsite lottery, onsite gambling with slots/blackjack/scratch tickets, award goals, the list goes on and on.

Your best bet is to just click around, see what's there, and go from there.

Obviously if you have any questions I'll help you with anything.

Oh! We also have a fancy "Convo's" feature so if you do decide to PM me for help, use that instead, it's IM rather than PM.

The little megaphone icon is for Convo's. Just hover over all the icons to see what they are.

Compared to the forum you came from, HF is absolute miles and miles ahead and always will be.

The first one didn't work because you're not supposed to include parentheses in the brackets. Try it again but this time do it without the parentheses and only the brackets how you normally would enter the MyBB code for anything else.

Also yes, the @@ method sometimes doesn't work for some members, not entirely sure why, though I have seen a few people bring that up.

Testing: @Injun Joe@ <- @@ method

Testing: [Injun Joe](#) <- [mention=uid] method

Also side tip: you're able to tag the OP of a thread by putting @"op"@ (remove the quotations "")

edit: Okay so the @@ didn't work but the [mention=uid] did. The @@ issue must be going around for a bunch of people right now I guess.

I always wondered why HF does not have a feature like this

Turns out there is one now, awesome!

This feature has been in place since around late 2019.

[Cooligan](#)

Oh so it's still the same

Oh yeah, in previews a bunch of things don't work until it's actually posted.

I've always just looked at it as "normal" I guess you could say.

I didn't know I could just not use the [mention] thing

Oh yeah, the @@ method of using it is way easier in my opinion.

Yeah, this thread was bumped randomly but it seems to be helping out a lot of people still so I'm leaving it be lol.

Exactly like that!

siddy357 - December 19, 2020, 9:37 am

Quality thread bumping won't hurt at times.

Thanks man. The mention tag was something I didn't know. Really helps for tagging members who have rather unique usernames.

MOD3M - July 22, 2026, 5:15 pm

[Cooligan](#) This doesn't seem to work.

Appreciate the tutorial, with not knowing lots about the site functions, it's nice to see people still teaching on here
