Thread: [\[Bug Report\] MyBB SQL Error upon Search Request with ""](#)

Jacque Fresco - October 25, 2019, 2:04 am

Is there a subforum for bug reports? i have not seen any, so i post this here.

I tried to search for a post i just know a part of the content of. So i used the Advanced search <https://hackforums.net/search.php>

When i tried to search with "" then i get the error below. I assumed it would work like on other search engines where it searches for the whole string and not just for the single words.

Reproduce _

1. Open the Advanced Search <https://hackforums.net/search.php>
2. Enter as keyword "have you checked if your port is open" with capital letters
3. tick "search entire post"
4. tick in show results as "posts"
5. Click Search

bang

However here are some pics

Unable to reproduce in firefox. Comes up with a list of posts for me.

Edit: Retried it and got an error so maybe a hit or miss type of thing?

I'm using Brave and I got the same error, however I typed it exactly like how you did but I removed the " " and it worked completely fine.

Omniscient - October 25, 2019, 10:27 am

It's actually causing a table memory error. Search ain't perfect. If you get an error you might have to just adjust your query.
