I was given a Vouch Copy for this product (Contract link:
<https://hackforums.net/contracts.php?action=view&cid=107242>)

I was very surprised at both the quality of Savitar's eBook and how well it worked! I was not expecting much more than some generic method, and what I received surpassed that very far! The methods are VERY HQ and not really something I would have guessed myself. I've gotten a couple accounts already, and I can see how much potential there is to make a ton of money doing this.

I loved the content, but what is even better is the seller, Savitar. Sav went the extra mile to make sure that everything was working super well for me, and even assisted me one on one. Very friendly guy, and definitely a seller I will purchase from in the future.

Content: 9/10
Support: 10/10

Do NOT hesitate to buy this! Very good product and a very good guy, I would have NEVER guessed this. Thanks OP!

This isn't a magical tool that will grant you access to a user's account or server, but instead a clever way to obtain the proper means to do so. For just \$10, this ebook is a good investment. It provides you with a variety of different resources to help you reach what you're going for. I've done very similar tactics to the methods provided in this ebook and could say they work flawlessly. Vouch!

I pray the people who you gave it to actually DO the method. I'm tired of seeing "the method will work.." instead of them trying it.

Does this e-book have anything to do with explaining how phishing/ratting works?

Does this require se'ing/tricking the owner of the server for their account? Pretty much every discord method I have involves that because of their decent security such as the one minute lockout to deter cracking and the new location check to prevent logins unless you have access to the email on file to authorize new IP's. It pretty much forces you to SE because its the easiest way to get discord accounts.

No it does not require SE'ing. Nothing like that.

(Oct 29, 2019 02:13 PM)Wikipedia Wrote: [\[CITE\]](#) There's a way that will allow you to bypass all IP address checks and it's by using the unique user token for the selected account.

Discord have been hiding behind security through obscurity where the unique user token is concerned for over a year now, but once you have the unique user token for the selected account, you can sign in to the account and control it without needing to know any of the account credentials nor having to adhere to any IP address checks.

Tokens don't let you jack accounts though, unless theres some way to update emails via an alt method it will force you to enter the current password so while it can bypass security it only gives you temporary account access until the person changes the pass on you.

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,

MoolazPotato - November 1, 2019, 7:02 am

Hey man I'm interested in your product, but I need to ask a few questions first. Like how does this method work ethical wise? You mentioned that it doesn't involve RATting or SE, but those should be the only confirmed ways of hacking a discord account/server. So if your method is really as good as advertised then I would definately buy from you. But I don't want to risk the chance of it being bs and not working.

Popstar - November 1, 2019, 11:39 am

Don't waste your money on this crap all he does is tell you to dox a server owner or get him to install a rat on them somehow. Gives no details whatsoever what to do after that

Figured and the idiot got closed another scammer bites the dust but my discord methods nothing like that, may make a post about it eventually. Claimed it wasn't ratting or SE but literally was I mean the guy clearly didn't study computer science in university if he thinks there was other magical ways to hack something. All methods involve some complicated thing even some se's require complex excuses.
