Thread: [How Did He Broadcast 99,100 Fake Bitcoins In One Transaction](#)

Light3r - October 28, 2019, 9:36 am

Hello Hackforum

I saw a video of someone that broadcasted 99,100 unconfirmed bitcoins in one blockchain transaction.

I'm unable to post link, i could have posted the YouTube video link here.

How was this possible. I thought bitcoin was unhackable or was this some kind of exploit or javascript?

Guru's in the forum should please comment answers because i have searched on google and i came up with nothing useful.

So i decided to post my question here.

Thank you in advance

Light3r

How about sharing the link without https or www so we know what you are talking about..

Boomer - October 28, 2019, 10:56 am

Yeah what the above user said, please share the link so we can know what exactly you're talking about.

jebb - October 28, 2019, 7:47 pm

You can broadcast anything you want to the blockchain. Doesn't mean it will get verified.

Omniscient - October 28, 2019, 8:09 pm

Broadcasting a fake transaction won't verify from the nodes. And then after 3 days I believe they get dropped.

Here are example transactions that are rejected.

Light3r - October 29, 2019, 12:19 am

Hi

Thanks for showing interest and i hope you will be able to explain the method he used to broadcast this huge volume of fake bitcoins in one transaction after watching this video. Here is the link to the video =>

youtube . com / watch?v=2NFMMNXyHNE

Thanks for your answer and blockchain link. I will be forever grateful if you can explain how to broadcast 99,100 fake bitcoins in one transaction?

Very likely just a scam or virus to get money from you.

(Oct 29, 2019 12:18 PM)ririki Wrote: [\[CITE\]](#) Very likely just a scam or virus to get money from you. Didn't watch the video but I am assuming a user was either:

1. Attempting a dust attack
2. Deanonymizing addresses

Pretty common occurrences with such transactions.

You see where it says Pending? That means the transaction is not confirmed yet (and never will be in this case).

Light3r - October 29, 2019, 6:34 pm

Thanks for your comment but NO, this is not a dust attack or Deanonymizing addresses. Try and watch the video

You can create whatever you want in a raw transaction and go ahead and broadcast it or use a 3rd party to broadcast it. It's fake and will be rejected.

Light3r - October 30, 2019, 6:30 am

Thank you so much for your answer. I never thought of this before.

So which software / site can be used to create raw transaction and broadcast it for free without having bitcoins because i wasn't able to create a raw transaction for free without having any bitcoin for payment?

(Oct 29, 2019 07:48 PM)Kill Joy Wrote: [\[CITE\]](#) You can create whatever you want in a raw transaction and go ahead and broadcast it or use a 3rd party to broadcast it. It's fake and will be rejected.

Hi Hackforums

Waiting for answers from you guys....

Your comments are highly appreciated.

Thanks in advance

This doesn't make sense, how can you create a transaction without btc? You have to have at least 1 satoshi to create a transaction

Light3r - November 2, 2019, 4:57 am

I'm as confused as you are because I also thought one must have at least 1 satoshi to create a transaction

Thank you so much for the link. It was very helpful, insightful and an eye opener.

Why did Satoshi Nakamoto code bitcoin to allow invalid coins to be broadcasted and later removed from blockchain history?

Which other altcoins allows invalid coins to be broadcasted and later removed from their network?

(Nov 1, 2019 06:37 AM)Kill Joy Wrote: [\[CITE\]](#) [bitcoind - Here's how to send raw transaction BTC using Bitcoin-cli command - Stack Overflow](#)

Light3r - November 11, 2019, 1:57 am

Sorry to bother you. Bitcoin Core occupies lots of space on PC. Are there any lightweight wallet desktop app or mobile app that can create 0 unspent raw transaction, sign it and broadcast it?
