Thread: [\[BATCH\] BatCrypt \(Obfuscate your batch code and execute it\)](#)

fisica638 - October 29, 2019, 6:00 am

It is a Comand line tool I hope it works for you.

LINK : github.com/salsoft2111995/Batch-Code-Ofuzcation-Proyects

It should be noted that this tool has a single bug. you should not obfuscate the variables within the % sign.

How is it used?

you create a batch with the following line:

PHP Code

```
<?php
```

BatchCrypt.bat -e (name of your batch to obfuscate) or use -d (I never finished it :v)

Example :

PHP Code

```
<?php
```

```
@echo off
```

```
echo hola mundo
```

```
pause
```

PHP Code

```
<?php
```

```
@echo off
```

```
set var="ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz"
```

```
@%var:~31,1%%var:~29,1%%var:~34,1%%var:~41,1% %var:~41,1%%var:~32,1%%var:~32,1%
```

```
%var:~31,1%%var:~29,1%%var:~34,1%%var:~41,1% %var:~34,1%%var:~41,1%%var:~38,1
```

```
%%var:~27,1% %var:~39,1%%var:~47,1%%var:~40,1%%var:~30,1%%var:~41,1%
```

```
%var:~42,1%%var:~27,1%%var:~47,1%%var:~45,1%%var:~31,1%
```

```
REM By Aincrad
```

AND THE DEPARTURE IS ALWAYS THE SAME. ?

Now the bug I commented a while ago, I will give you an example:

If they obfuscate the %m% part, the code will not run:

PHP Code

```
<?php
```

```
@echo off
set m=hola mundo
echo %m%
pause
```

PHP Code

```
<?php
@echo off
set var="ABCDEFGHIJKLMNOPQRSTUVWXYZabcdefghijklmnopqrstuvwxyz"
@%var:~31,1%%var:~29,1%%var:~34,1%%var:~41,1% %var:~41,1%%var:~32,1%%var:~32,1%
%var:~45,1%%var:~31,1%%var:~46,1% %var:~39,1%= %var:~34,1%%var:~41,1%%var:~38,1
%%var:~27,1% %var:~39,1%%var:~47,1%%var:~40,1%%var:~30,1%%var:~41,1%
%var:~31,1%%var:~29,1%%var:~34,1%%var:~41,1% %m% ----- As
you can see Obfuscate everything but %m% so the perfect code will run.
%var:~42,1%%var:~27,1%%var:~47,1%%var:~45,1%%var:~31,1%
REM By Aincrad
```
