Thread: [why won't the title div center?](#)

craigOwnsYou - October 31, 2019, 1:13 pm

I really want to make my title center. I think that I need to do that to make it look neat.

For some reason the title of the page, made using h1 tag, stretches across the web page and I intended for it to explicitly not do that.

HTML code:

```
Code <!DOCTYPE html>
<html lang="en" dir="ltr">
  <head>
    <meta charset="utf-8">
    <title>John Doe</title>
    <link rel="stylesheet" href="styles.css">
  </head>
  <body>
    <div id="hcontainer">
      <div id="vcontainer">

        <h1 id="lawOfficeName">The Law Office of John Doe</h1>

        <br>
        <br>

        <div class="menu">
          <div class="button">
            <a href="home.html">HOME</a>
          </div>
          <div class="button">
            <a href="#">TESTIMONIALS</a>
          </div>
          <div class="button">
            <a href="#">EXPERTISE</a>
          </div>
          <div class="button">
            <a href="#">EDUCATION</a>
          </div>
          <div class="button">
            <a href="#">CONTACT</a>
          </div>
          <div class="button">
            <a href="#">MINIMUSINGS</a>
          </div>
        </div>

        <br>
```

```
<div class="description">
  <p>John Doe, in his 30 years as an entertainment attorney, has done it all,</p>
  <p>including big-firm law practice (Loeb and Loeb, Mitchell Silberberg and Knupp), and
in-</p>
  <p>house stints at companies ranging from Paramount Pictures (where he spent 12 years
</p>
  <p>as a Senior Vice President) to independent film production and distribution
companies. </p>
  <br>
  <p>Whether you're an individual, a medium-sized company or a mega-conglomerate,
John</p>
  <p>Doe is ready to represent you in your film, television, music or Internet transaction.</p>
  <br>
  <p>Current and Recent Clients of The Law Office </p>
  <p>of John Doe include:</p>
  <br>
  <p>Lionsgate, Lucasfilm, Paramount Pictures, Walt Disney Records and Hollywood
Records.</p>
</div>
```

```
</div>
</div>
</body>
</html>
```

CSS code:

```
Code #vcontainer {
  display: table;
  height: 100%;
  width: 1000px;
}
```

```
#hcontainer {
  display: table-cell;
  vertical-align: middle;
  text-align: center;
}
```

```
.menu {
  justify-content: center;
  text-decoration: none;
}
```

```
div.button {
  display: inline-block;
  margin-right: 20px;
}
```

```
.button a {
  text-decoration: none;
```

```
font-size: 15px;
border-radius: 20%;
color: purple;
font-family: fantasy;
font-weight: bold;
border: 5px solid purple;
background: yellow;
}
```

```
.button a:hover {
border: 10px solid blue;
background: cyan;
font-size: 25px;
color: blue;
}
```

```
#lawOfficeName {
justify-content: center;
margin-top: 50px;
font-size: 50px;
font-family: fantasy;
color: cyan;
background-color: navy;
}
```

I really want to make sure I get it working because I want to end up with something decent for my dad.

UPDATE!!! I fixed it. I just had to set it to display as an inline block.
