Thread: [The project path is not reliable](#)

nicodemo - November 3, 2019, 5:45 am

<https://photos.app.goo.gl/B1UuUAHDS7K5Hk549>

I copied the entire Visual Basic project to a nas folder. When I open the project, I see the message warning me that the project path is not reliable. When I try to debug I see an access denied error. See photos.

HFDone - November 3, 2019, 5:52 am

copy it back to the original path

I would like to use the nas to save Visual Basic projects. So I'd like to find a solution to be able to debug projects saved on the nas.

According to <http://woshub.com/windows-10-1803-cant-run-exe-files-shared-folders/> this has to do with the SMB version supported by the NAS.

KB4284848 is said to also bundle a fix for this issue.

KB4284848 is said to also bundle a fix for this issue.

I apologize, I forgot to mention that I use Windows 8.1 so the article you recommended to me is unfortunately not for me.

<https://support.microsoft.com/en-gb/help/2696547/detect-enable-disable-smbv1-smbv2-smbv3-in-windows-and-windows-server>

The features are still supported in Windows 8.1 and do in fact affect the ability to run executables from an NAS.
