Thread: [Create a bootable usb with WIN7/8/10](#)

Slumerican ? - November 3, 2019, 8:55 am

Hey, guys, I need to make a bootable USB with all windows versions on it (win7 8 10) to avoid using a multiple usb each format I do.

As we know Windows 10 is UEFI and 7 is Legacy MBR

So I downloaded a single ISO file with all windows on it and now I'm trying to make it bootable via "MBR" option with Rufus (you only can choose MBR or GTP)

So if this don't work can anyone of you share an idea how can I make this work?

Thanks in advance.

<http://multibootusb.org/> should fit your purposes nicely.

Have you tried with diskpart?

Guys tried that one with RUFUS. Just downloaded the 15 GB ISO file that contains all windows versions and make it bootable via MBR and it worked!

Thank you so much for your reply I really appreciate it.
