Thread: [HTTP Botnet Questions \(Hosting, UBoat/Gaudox, etc.\)](#)

MrNacho123 - November 3, 2019, 6:11 pm

I have had a lot of experience using RATs but I was thinking about giving botnets a shot. I was looking for a native http botnet and I came across LiteHTTP, UBoat, and Gaudox as my non-cracked net options. I crossed LiteHTTP off of the list because it has a .NET 2.0 dependency. UBoat looks great but I cannot find too much information on it. Gaudox seems like an option as well but it is old and I am not sure if it has proven to be persistent.

Which of the two (UBoat and Gaudox) are more stable? I do not want to lose clients. I am using Spartan Crypter Gold.

Is there another net you can recommend me? I do not mind using a cracked version as long as it is stable. I am really only looking for a stable net with good persistence that allows download/execute. Everything else is a bonus.

Can I use shared webhosting? I have seen certain vendors offer plans for shared webhosting, as opposed to a VPS or a dedicated server, starting at \$5/month. I have a feeling that I am missing something because, why doesn't everybody just use shared webhosting if it is cheaper? (other than the lack of power)

Can you recommend me an affordable webhost? Preferably less than \$10/month.

What type of specs should I look for in hosting? 50GB storage? 2GB RAM?

I have used the searchbar but there is too much controversy over cracks such as Parasite and Smoke Loader and I have many questions so I decided to just create a thread.
Thank you.

UBOATs panel doesnt work you have to edit. gaudox has only plugins but! UBOAT has keylogger and much more.

i have a private botnet HTTP ofcourse man. has 8 plugins ill setup for you. costs \$150
empty yours inbox

Hello, I can setup this HTTP rat for you or give you one from my own collection. My hosting costs 1\$-5\$ per month, depends on file size and databases.

What about BYOB? It's on github aswell.

MrNacho123 - November 5, 2019, 6:50 pm

(Nov 5, 2019 02:11 PM)TheHunter Wrote: [\[CITE\]](#) What about BYOB? It's on github aswell.I read somewhere that it is really not too practical for real world usage. More of a PoC.

Just took another look at BYOB. I wouldn't mind trying it out for fun on a VM. Will using py2exe break the script?

satoshikilla - December 4, 2020, 6:15 am

Can someone clarify why uboat's panel is not working?Ive never heard such a thing?

Guadox i can say is a decent loader with download and execute.

Gaudox will give you just that.

f0rest - December 4, 2020, 10:12 am

The best way to get a stable botnet,
code your own the Base you find on Github..

Willto - December 14, 2020, 1:31 pm

Give Blacknet a try, if you need help setting it up you can contact me :)
