Thread: [Interesting: Solving Rubiks Cubes \[Blind\]\[Feet\]](#)

DNA - November 5, 2019, 2:24 pm

Just came across this in my recommendations, very interesting.

I couldn't solve one, yet alone 48 or so while blindfolded...

[Solving Rubiks Cube Feet World Record](#)

-itsJonny - November 5, 2019, 5:38 pm

I'll never understand how people can do this, I've seen it happen in a matter of seconds. Blindfolded, behind the back, etc.

DNA - November 5, 2019, 5:49 pm

Blindfolded, behind the back, etc.

Looks to me as if they're permitted to set it up a specific way, so it's possible that his muscle memory has retained this information, similar to guitar players and chords

oneheadfromdeath - November 7, 2019, 2:26 pm

And then there is me not knowing how to solve these, sigh...

-itsJonny - November 7, 2019, 4:04 pm

The videos I saw, a random person would randomize it for 'x' amount of seconds, the person solving the cube would then examine it for about 3 seconds, set it down, and then pick it back up and solve it to record his time.

Lorem Ipsum - November 7, 2019, 4:07 pm

There are amount of ways to solve a Rubik's cube, while I still have no clue how to properly solve one.

Not alone aha

Blindfolded?

I checked the WCA website, they even have feet based competitions...

I feel like they've solved it once and that's all they know on how to solve it, could be very wrong

spiral - November 7, 2019, 4:16 pm

doubt I could ever solve one in my entire life, Im pretty sure I once managed to get two colours done, but couldn't do anymore lol

LOLATCUCKS - November 7, 2019, 4:18 pm

It's a fixed algorithm. Nothing special.

Psilocybe - November 7, 2019, 4:23 pm

Damn bro that's some crazy shiz, imagine having the ability to feel colors lmao. No idea how this would be possible unless there was braille on each color so they can tell the difference through touch. Otherwise it MUST be a fixed strategy.

Cartel - November 7, 2019, 4:24 pm

How is it even possible to do this without looking?

???????????Michael Kors - November 7, 2019, 4:29 pm

(Nov 7, 2019 05:24 PM)Cartel Wrote: [\[CITE\]](#) How is it even possible to do this without looking? They're given a few seconds to analyze the cube's patterns before starting.

DNA - November 7, 2019, 9:10 pm

(Nov 7, 2019 05:18 PM)LOLATCUCKS Wrote: [\[CITE\]](#) It's a fixed algorithm. Nothing special. You're blindfolded for starters, there's 48 cubes or so. He came second with 3 failed cubes.

If you can do better, please show us all, otherwise show a little appreciation for the dude. It's probably all he's ever tried to achieve in life for all you know lol

Yea dude, I feel they figured it out once and remembered how to do it and so that's how they are able to set it up and do it like they do. Similar to piano or the frets of a guitar.

I could play the guitar blindfolded, because of muscle memory, but I've sold my guitar and moved on in life and now I bet if I tried play it again, I'll be ass asf

(Nov 7, 2019 05:24 PM)Cartel Wrote: [\[CITE\]](#) How is it even possible to do this without looking? Have a look at all the cubes prior to him putting his blindfold on. Notice they're all the same? Well all but 3

(Nov 7, 2019 05:29 PM)???????????Michael Kors Wrote: [\[CITE\]](#) They're given a few seconds to analyze the cube's patterns before starting.

In the start he was allowed to adjust them before putting the blindfold on. It looked like he had a minute to do this before starting.

Still, you'd have to be pretty talented to remember the sequence and get it correct with such accuracy.

I wanna see the feet contest aha
I just saw the feet one lmao
Cracked me up

There are a finite number of combinations the rubik's cube initial conditionals could be... clearly the kid has been studying them for awhile.. it's not difficult if your entire life revolves around memorization

Yea but you know, whatever lol, still cool to watch. I had someone in disbelief over it today, he thought it was bs lol

Linux X - November 7, 2019, 10:38 pm

This Rubik's cube is not for me.

Zero - November 7, 2019, 11:14 pm

Tbh after you actually see to learn how to solve it it's pretty easy.

From there you just get better and skip algorithms until the 30secs~60secs part.

Faster than that will require practicing and be very good at it.
