Good work man!

You'll need to check it for spelling mistakes but other than that it is a very quick guide.

Might want to mention that it contains the tools as well since some people don't want to download this on their main rig.

most likely seal hosting it's a decent one or crident(but it's expensive), or you could just tell someone with a VPS to drop you some good prices and that's it!

Thanks for your quick response but one quick one; Are nameservers the same as dns? Do they mean the same thing?

TheAnon.hf - November 24, 2019, 8:58 am

(Nov 24, 2019 09:00 AM)BlackPanth3R Wrote: [\[CITE\]](#) Thanks for your quick response but one quick one; Are nameservers the same as DNS? Do they mean the same thing?

A name server translates domain names into IP addresses. This makes it possible for a user to access a website by typing in the domain name instead of the website's actual IP address. For example, when you type in "www.hackforums.com," the request gets sent to the website name server which returns the IP address of the website.

Each domain name must have at least two name servers listed when the domain is registered. These name servers are commonly named ns1.servername.com and ns2.servername.com, where "server-name" is the name of the server. The first server listed is the primary server, while the second is used as a backup server if the first server is not responding.

Name servers are a fundamental part of the DNS. They allow websites to use domain names instead of IP addresses, which would be much harder to remember.

BASICALLY: Nameservers are a part of the DNS

A total newbie question, but everyone starts at the beginning.

After downloading the files from here, My Norton AV throws a fit and deletes the lot.
Are these a threat to MY pc when I download them?

What's my best course of action?
SONAR has deleted everything so far!

so basically since each tool is a builder(apart from some binders and the Lime Crypter) they basically contain malicious string of code that will be built in the final Result(The RAT) so it's basically normal that they will get detected, you can go ahead and shut your AV down or set rules for the files that you've downloaded, for making so like they won't get detected you need a good crypter so they won't be detected anymore, you can either buy one or make it yourself, all the tools are clean(because I've got off them off GitHub or their direct dev) but I suggest for extra safety run them on VM!

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

abofo6 - April 22, 2020, 10:35 pm

tried downloading it but it seems the file has been trashed

Tangyy - April 22, 2020, 10:57 pm

Does this still work lmk (=

gethro_ - April 23, 2020, 2:59 am

funny, when i clicked the gdrive link for a few seconds i could see the download button and download the file. after about 3 seconds it says the file is in the owner's trash. lol

anyway, thanks for this!!!

hmnlp - April 23, 2020, 3:46 am

thanks a lot man, I always wanted to understand more about this field

replacement incoming for you my friend, Enjoy!

https://anonfile.com/l2nfE793n1/RAT_Guide_zip

the drive link doesn't work for users idk why, i made a backup upload in any case for everyone LOL.
btw the Zip password is TheAnon.HF, for anyone who's confused about it(it is as well in the thread
but some people are that lazy they don't want to read it all lol)
