Thread: [Any fun things to do with CMD on school wifi?](#)

CallMeMarc - November 11, 2019, 6:03 pm

I wanna mess around with my friends on the school wifi.

In health class we usually have a good amount of time to do random stuff on the computer and I've recently had some fun with cmd. So far I have found the county staff wifi password, crashed the windows interface with calculator windows(no permanent damage), made a bat file that looks like its random matrix stuff, and watched star wars episode 4 in ascii.

Is there any scripts I can make to have fun? Mess with people?

I know I can do shutdown -l and turn peoples computer off, but what else can I do?

complexz - December 1, 2019, 3:39 pm

type into int " shutdown -i " a remote shutdown dialog wil pop up and ou can shutdown any windows pcs on the network

I imagine you only have standard accs on your school computers? (be amazed if not) you would want to elevate them to be able to have more fun in CMD or better Powershell..

Are you able to plug in USB sticks? are the ports on the computer visible to most people? What AV is running on the computer(s)?
