Thread: [Checkout my Chrome extension, let's you watch pirated movied on YouTube!](#)

The Blunt - November 18, 2019, 5:20 pm

Hey everyone!

How it works:

I just thought I would share this chrome extension I have been designing for better half of a year. It is called Mediaflare.

It works by hooking onto special YouTube videos that are encoded like a puzzle, and applies JS and CSS to make it a fully formed frame. Check it out and give me feedback! I just updated it so it's not even laggy. Any feedback appreciated! Using big buck bunny, I have several YT links you can play with if you comment!

<https://chrome.google.com/webstore/detail/mediaflare/epigelmkcmdoagfjomhemkalbbbpkja>

After installing, you can watch these Encrypted videos! (Check it out before installing too!)

After experience:

Ravioli - November 18, 2019, 6:20 pm

This definitely isn't the right section for this.

Joel - November 18, 2019, 9:11 pm

Just a heads up I don't think this is allowed on Hackforums. But the idea behind it is pretty fucking cool actually, all it would take tho is a Google Engineer to reverse your obfuscation process and it would be over.

Since I am using "Big Buck Bunny" this is legal and the tool is just JS, so it can't ever be taken down etc. Just need people to reupload. I can even place ads in the beginning lol.

The algorithm is just a 25 tile matrix shuffled and inverted/mirrored and color shifted, but it is computationally expensive. A report is all it really needs.

I want people to tell me this is a bad use of my time!

For those of you with my plugin, you can check out a full episode example of Better call saul, ignore the little lines.

RomanShirokov - November 18, 2019, 10:44 pm

Thanks for your help.

I will try to use it.

Thanks.

Zero - November 18, 2019, 10:55 pm

It's very laggy.

Nice idea but you gotta find a way to make people actually upload videos like this.

The description has a button for downloading the video youre watching to allow reuploading of mirrors etc. I have a tool that builds these files.

Was it really laggy? What kind of CPU do you have?

16gb

What description are you talking about?

DrDoof - November 19, 2019, 7:58 am

It's cool but pretty useless to be honest not to burst your bubble... You have to look into the possibility of changing resolution and right now it's very laggy, I'm on a mid-end desktop cpu from half a decade ago.

Alright, I know the 1440p version is resource intensive. It runs fine on 2012 iMac and 2016 Macbook Pro. JS is single threaded.

I am designing a performance update that should fix this issue if you can watch normal 1440p quality. The plugin forces the best quality and you can't change it after wards, that sounds like a bug I should fix! Thank you!

I updated the Extension, go and reinstall it (remove and download again)! This will allow you to choose qualities.

I see what you guys meant by laggy in 1440p.. the default is 1080p and works flawlessly :)

(Nov 19, 2019 08:49 AM)Zero Wrote: [\[CITE\]](#) 16gb

What description are you talking about?

The video description is edited once you have the plugin to give you download links to redistribute etc.. really cool code tbh.

iExploits - November 19, 2019, 11:20 am

Your pm is full. I can't reply to you.

My bad, thought you were ignoring me. Thanks for downloading the extension ?

Hey, I updated the Extension, it was 50% slower, now it runs perfectly fine on old machines.

Those sites cost money to run, filled with ads, can be taken down, and is centralized. This is the opposite :)
