Thread: [Alternative To Bitcoin Core Wallet That Can Create 0 Unspent Utxo & Broadcast It](#)

Light3r - November 20, 2019, 6:54 am

Hello Hackforum

I have Bitcoin Core installed on my Windows Operating System but it's taking forever to update.

My internet connection is not fast. This week is making it the 4th week I installed it and I'm still 5 years and 3 weeks back in the update.

I still have long way to go to finish updating it and I am running out of patience. Lol...

Can you suggest alternative bitcoin wallet that can create 0 unspent utxo and broadcast it like Bitcoin Core?

Thank you

jebb - November 20, 2019, 5:45 pm

Is there any specific reason you want to create invalid transactions?

Light3r - November 21, 2019, 10:12 pm

My reasons are good reasons. Do you have answers to my question?

>0 unspent utxo

what do you mean by this, more specifically.

Light3r - November 22, 2019, 4:51 am

Can you please allow bitcoin programmers on hackforum to answer my question. Thank you

His question is valid. Do you mean the transaction should leave you with no unspent utxos left over in your wallet or it should spend every last bit of its own utxos (inputs)?

The first one is easy, just include all utxos as inputs and send the coins wherever you want. The second one probably wouldn't get mined for quite some time if at all because there would be no fees

left over.

Don't be rude to people trying to help you, your question doesn't make sense. Firstly, the U in UTXO stands for unspent, so your question says "create 0 UTXO". Are you trying to create a transaction with an output of 0 BTC? Or a transaction with no outputs, i.e. burning all the coins?

If you want your questions answered, ask a valid question.

Light3r - November 23, 2019, 2:07 am

I wasn't trying to be rude to him. I was polite to him in the best of my knowledge. I'm trying to create a transaction with an output of 0 BTC without Bitcoin Core

Thanks for your comment and honesty. I know how to create, sign & broadcast valid transactions via blockchain . com /btc/pushtx

blockstream . info /tx/push

blockchair . com /broadcast

live . blockcypher . com /btc/pushtx/

I don't know how to create, sign & broadcast invalid transactions without bitcoin core wallet and that's what i would like to learn

(Nov 20, 2019 09:07 AM)Focus Broken Wrote: [\[CITE\]](#) You can try broadcasting with this: [Bitcoin Explorer - Blockstream.info](#)

I'm not technically educated enough to say whether or not your transaction type is valid or will be propagated on by them, but I doubt any other wallet has the ability to create a nonstandard transaction.

I have Bitcoin core on VPS downloaded with full blockchain and ready to fire if you are interested ping me or open conversation and leave your telegram or dicord.

Light3r - November 27, 2019, 11:56 pm

Yes I'm interested. Is your vps free? If no, how much to rent it for a year and do you have any free trial for testing purpose?
