Thread: [\[Snapchat\] How to upload live snaps from camera roll! \[Free\]](#)

Root-Senpai - November 23, 2019, 4:07 pm

So if you do ewhoring you may have looked for a tool to upload live pics from camera roll before, there are many being sold here in the forum. But using this free open source tool you can save your money! Please note this is only for android, this will not work for iOS users!

Here I will teach you how to setup !

First head over to create an account at <https://kit.snapchat.com/portal/>

Next step will be to create an app using the button labeled "add".

Change the name to whatever you want such as "Camera" for example

Search in page for "Development Environment", click the tickbox to enable the android.

In the "add your name" textbox paste in "com.snapchat.kit.creativesample". After this copy your "Client ID" in to a notepad. Save for later! Scroll to the very bottom of the page now add your Snapchat usernames for the accounts you want to be able to use the app with to the accounts section. You can change these anytime in the future very easily to add new accounts incase any of yours get banned or you make new ones, whatever.

Download [this ZIP archive](#)

Extract the ZIP archive and then install [Android Studio](#)

Once it has installed open a project and select the one from the archive you have previously extracted!

Look in the explorer view tab in Android Studio for the file "androidmanifest" and then look inside the code for "android:value="

Here is where you will insert your Client ID you saved from earlier. It will be like this:
Code android:value="(Client ID Here)"

Now goto the top toolbar menu look for "build" and click "generate signed APK" then "APK" click on the "create a keypath" and enter the info, click next then tick "Check V2 signature". Click Finish and then it will generate your signed APK file. If you do not see "generate signed APK" then you need to sync with gradle. If you need any help comment below for some extra help!

Download the APK on your phone and open the application to start using it! Very simple hope you enjoy ?

Babygirl0099 - November 27, 2019, 1:13 am

I'm having a hard time doing this. I've been trying. Is there anyway you can put my snap name in yours if you did it since you can put multiple??

nuc04 - November 28, 2019, 1:20 am

can i directly download it on my phone?drop me pm on this

luck? - November 28, 2019, 3:55 am

Any possibility for iOS mate?

Born2Help - November 28, 2019, 4:17 am

After completing the steps till copying the code. Shouldn't we submit for review or save?

Root-Senpai - November 28, 2019, 4:27 am

(Nov 28, 2019 02:20 AM)nuc04 Wrote: [\[CITE\]](#) can i directly download it on my phone?drop me pm on thisyes, you can upload your compiled APK to any of your favorite file sharing website, and download on your phone

(Nov 28, 2019 04:55 AM)luckymkd Wrote: [\[CITE\]](#) Any possibility for iOS mate?No, will come out with an iOS tutorial in the future.

(Nov 28, 2019 05:17 AM)IAmReaz Wrote: [\[CITE\]](#) After completing the steps till copying the code. Shouldn't we submit for review or save?No, do not! Not at all

Born2Help - November 28, 2019, 4:59 am

Ok, but.. I don't see the generate signed APK option on the BUILD menu. :/

Root-Senpai - November 28, 2019, 12:46 pm

(Nov 23, 2019 05:07 PM)Root-Senpai Wrote: [\[CITE\]](#) If you do not see "generate signed APK" then you need to sync with gradle.

itzDrizzy - November 28, 2019, 4:38 pm

bro i stuck in there ;

Now goto the top toolbar menu look for "build" and click "generate signed APK" then "APK" click on the "create a keypath" and enter the info, click next then tick "Check V2 signature". Click Finish and then it will generate your signed APK file. If you do not see "generate signed APK" then you need to sync with gradle. If you need any help comment below for some extra help!

i have just Analyze APK.. in this section. what to do ?

@Root-Senpai

File -> Sync Project with Gradle Files

if that doesnt work do build -> rebuild project then try again

Lemme know if u still need help!

@Root-Senpai

Gradle project sync failed. Basic functionality will not work properly. there some codes are red in command page.

my pleasure :)

k02l210 - December 3, 2019, 4:36 am

I don't see the generate signed APK option on the build menu and the sync project with gradle files on the file menu.

Can you help ?

alymil - December 5, 2019, 2:59 am

Hi, i've got the same error saying "gradle project sync failed. basic functionality will not work propely." Its showing multiple attribute not allowed and unresolved package errors. Could you help me please?

k02l210 - December 6, 2019, 2:28 pm

anyone else get "there was a problem while parsing the package" when trying to install on phone ?

vRWN - December 7, 2019, 9:30 am

Posting to check this out later. This is looking good, thanks OP!

Fortniteistrash - December 7, 2019, 8:30 pm

Hey first of all thanks a lot for the help you da best. So few hours ago i got error in Snapchat something went wrong my apk was working fine for almost 1 week so i don't think there's any problem with my apk so this means that this method is patched already :(?

(Dec 6, 2019 03:28 PM)k02l210 Wrote: [\[CITE\]](#) anyone else get "there was a problem while parsing the package" when trying to install on phone ?

Bro this method is patched already i guess. If you want i can add your name and give you apk?

Never mind it works fine now idk for 2 hours app wasn't working thanks a lot !!!

bluebirdxox - December 8, 2019, 3:24 am

What do we put in for the URL redirect ?

Also when making the app on snapkit it's asking for a demo video/ then submit for review ?

k02l210 - December 8, 2019, 11:35 am

yh bro no one is helping me with this ...

taxi223 - December 9, 2019, 3:58 am

is this working now ? mine stopped working. patched ??

Root-Senpai - December 9, 2019, 9:07 am

Believe it has been patched Sorry everyone
