Thread: [\[Bash\] Can anyone help me create a quick bash script?](#)

.eXe - December 2, 2019, 8:11 am

I need to create a list of files with their MD5 sums in this format:

[proprietaryfiles.txt](#)

Effectively the script needs to recursively run through folder and list the files as well as the directory it's in (along with its parent(s)).

A simple recursive bash script; adapt it with your md5 function.

```
function md5()
{
    #Your md5 function
}
```

```
function rec()
{
    for file in $1*
    do
        if [ -d $file ];
        then
            rec $file/
        else
            md5
        fi
    done
}
```

```
rec ~/
```
