Thread: [tkinter Error/ insert text from another function help](#)

h0ly1337 - December 11, 2019, 6:36 am

this is the code guys just tryna make the update text function work the error i get is "AttributeError: 'App' object has no attribute 'textbox'"

```
Code import os
import requests
import json
import hashlib
import time
```

```
from tkinter import *
from tkinter import ttk
import threading
```

```
class App(threading.Thread):
```

```
    def __init__(self):
        threading.Thread.__init__(self)
        self.start()
```

```
    def callback(self):
        self.root.quit()
```

```
    def run(self):
        self.root = Tk()
        self.root.geometry('500x300')
        title = Label(self.root, text='H0lyAV v0.1')
        title.pack()
        tabocontrol = ttk.Notebook(self.root)
        tab1 = ttk.Frame(tabocontrol)
        tab2 = ttk.Frame(tabocontrol)
        tabocontrol.add(tab1, text='Main')
        tabocontrol.add(tab2, text='Settings')
        self.textbox = Text(tab1, height=10, width=100)
        self.textbox.pack(side=BOTTOM)
        self.text = Text(self.textbox)
        b1 = Button(tab1, text='asdf')
        b1.pack(anchor='w')
        self.root.protocol("WM_DELETE_WINDOW", self.callback)
        tabocontrol.pack(expand=1, fill="both")
        self.root.mainloop()
```

```
    def updatetext(self):
        self.textbox.insert(INSERT, 'ASDF')
```

```
if __name__ == '__main__':  
    App = App()  
    App.updatetext()
```

Nothing ever calls App.run, thus, self.textbox isn't initialized.
