Thread: [Junked ---- Closed](#)

Cyber Rick - December 15, 2019, 7:36 am

Thread no longer valid/product no longer for sale on HF. Don't have option to junk thread for some reason, can only edit and close.

[contract=tid]Start Contract[/contract]

President Trump - December 15, 2019, 1:00 pm

Since you claim to be a registered Canadian business, what is your Corporation Number or your Business Number?

Thank you.

Edit: Seeing as you got my reply deleted, you claim that you're a registered business yet your Business Number and even the company name are not registered. Why are you lying about being registered?

SIM-4062753 - December 31, 2019, 12:58 pm

Great Hosting, cheap price, with an amazing performance and a friendly support team

big vouch.

Cyber Rick - December 31, 2019, 1:30 pm

Your post doesnt show your a contracted customer for some reason. I would include your contract with me (<https://hackforums.net/contracts.php?action=view&cid=126951>) so staff don't give you a warning. Pleasure doing business though!

MavenGradle - January 8, 2020, 9:22 pm

How are your VPS services remotely competing against the likes of Azure, Amazon, DigitalOcean and [censored]?

Your pricing is way off the charts in my opinion, and it offers no real advantage over the services mentioned above.

What are your plans to combat the issues addressed above and how is this even remotely sustainable for you?

This comment is made in regards to your prices, which is an important piece of information any potential customer here should be aware of. This is not a 'sales trash' any more than competitors are.

It's just that as a potential future customer, you might like to have some kind of assurance that the services offered only in the UK for VPS are actually worth investing in.

Unlike our competitors, we offer

- SAN - Network Storage
- Data Replication
- Fail-Over Storage
- Fail-Over Hypervisors

Vs our competitors such as D.O, Google Cloud, Azure and AWS, our average I/O speed is 945.3 MB/s while Digital Ocean is 307 MB/s and google cloud is 124 MB/s

(utilizing 2 CPUs, 4GB ram, 20GB SSD storage & CentOS on all cloud VM) Our Unix bench score hit over 3000 while AWS hit 2000, Microsoft Azure hit 1500 and google cloud hit around 1250.

We have a much better value when it comes to our products. We aren't trying to be the cheapest. We are trying to be the best.

Orgy - January 9, 2020, 12:40 pm

(Jan 9, 2020 03:00 AM)HQIT Wrote: [\[CITE\]](#) - SAN - Network Storage
Where can I order this from you?

(Jan 9, 2020 03:00 AM)HQIT Wrote: [\[CITE\]](#) - Data ReplicationWhere are you replicating the data to and how often? If someone hacks my VPS and trashes the data, will you still have the replicated data intact? By the way, I almost guarantee that your named competitors have some sort of data replication for VMs. They won't want to be blamed for data loss when one of their nodes goes down.

(Jan 9, 2020 03:00 AM)HQIT Wrote: [\[CITE\]](#) - Fail-Over Storage
- Fail-Over Hypervisors
What does this even mean?

(Jan 9, 2020 03:00 AM)HQIT Wrote: [\[CITE\]](#) Vs our competitors, our average I/O speed is 945.3 MB/s while Digital Ocean is 307 MB/s and google cloud is 124 MB/s

Sequential is meh when it comes to VMs. Is that just reading or writing? I'd be interested in seeing results of both

Again, I'd be interested in seeing the results here. Can you post the full results of your unixbench on

each service?

(Jan 9, 2020 03:00 AM)HQIT Wrote: [\[CITE\]](#) We have a much better value when it comes to our products. We aren't trying to be the cheapest. We are trying to be the best.
But the people you're reselling from are offering the same service for a much more reasonable \$11/mo, no?

1. SAN - Network Storage is included with our VPS'

2. Your data is mirrored to redundant hardware in real-time. If someone "hacks your VPS" that would be your responsibility and unless you have backups enabled/paid for then no, your data would not be "intact". The data replication is to prevent any issues arising due to "our" negligence/hardware failure etc.

3. It means exactly what it says.

Definition: Failover is a backup operational mode in which the functions of a system component (such as a processor, server, network, or database, for example) are assumed by secondary system components when the primary component becomes unavailable through either failure or scheduled downtime.

Hypervisor: A hypervisor is computer software, firmware or hardware that creates and runs virtual machines.

4. It is an average of both reading and writing.

5. I have kept a copy of the raw output from all providers, I can give that to you if you would like (.rtf)

6. I am unfamiliar with any hosting company offering identical services for \$11/month however my partner hosting company in which I have a contract with for the server and co-location does offer

identical features and performance but also for a very similar price to what we sell for. We may charge a couple of dollars more, however, that comes with us being your provider instead of them which CAN include faster and/or better support since we are a smaller company among other possible future features.

Obviously, neither of you are interested in actually purchasing anything. Please get off my thread, it's very obvious you are just trying to sales trash.

Stanley - January 10, 2020, 9:10 pm

I'm Stanley HF's helper bot. This OP (original poster) of this thread wants everyone to see this page

and has elected to bump it to the top of the showthread listing. Since HF doesn't want a ton of LQP (Low Quality Posts) this is the best method of bumping your content. There is a small ?yte fee for each bump. Any OP can bump any of their threads on HF from the linked icon on the top of their first post.

If you haven't already read the first post of this thread we encourage you to do so.

Thanks,
Stanley

There is a huge misunderstanding here; I needed to host my API, I said why not give them a try. Well, I think we can say i have been fooled.

First, their cPanel comes with the IP Blocker module, but we cannot setup the module or its rules. Whenever I try to access my php scripts, the ip blocker blocks my ip, so I cannot work at all on my API ! Their ip blocker rules is dumb as f*, i just access a php script and BOOM my ip gets blocked, and i had to offer myself a [censored] account because my main ip is definitely blocked due to the fact that their rules blocked my ip too many times.

Second, I open a ticket and ask for their technical service to allow me to tweak the rules or at least do something for my case, which i'm sure i cannot be the only one in that case, they told me that they cannot tweak the rules or create custom rules, and they asked me to buy a VPS of their service. The Hosting plan is 1.99 while the VPS is minimum 39.99 (the first VPS plan will get you a laggy and buggy VPS, especially if you select Windows because it has too few ram and cpu).

Third, they offer no real support on discord, the dude just give you his discord for marketing purposes, but as soon as you try to report an issue, it's a systemic "please open a ticket" reply. When I introduced myself and my project the dude on discord said " Should be fine. We have pretty good DDoS protection so it would take a lot of power to take down the server. If it's a recurring ongoing issue we may ask that you purchase a VPS though. Legally I also don't see any issue". But everything he said was not real in the end : their ddos protection is not good, it's sloppy to the extent it blocks legitimate connections;

To whoever wants to get a cheap host for their developping projects, I DO NOT RECOMMEND USING HQIT Hosting at all. I feel sorry to post this, but I feel like i've been lied.

It doesn't even seem that you are a customer of mine....you don't even have a contract with me. Not sure what your talking about and half of what you wrote here is bs

SUI-3183372 - January 11, 2020, 2:40 pm

(Jan 11, 2020 03:24 PM)HQIT Wrote: [\[CITE\]](#) It doesn't even seem that you are a customer of mine....you don't even have a contract with me. Not sure what your talking about and half of what you wrote here is bs

I was really interested on you handled this.

I was really hoping you'd apologize for the confusion and work with your customer to fix the problem, and if you couldn't, offer him a refund. Owning up to things like this is highly respectable.

However, and like I told all the people who linked me to this thread after he made that post, I was wagering that rather than dealing with your issues head on like a respectable "professional" would, that you'd pretend that this guy isn't a customer of yours entirely due to a lack of contract to try to just make this problem disappear.

This is a large shame. After chatting on discord the other night I had hoped that going forward you'd be more accountable and honest with this community. You chose to take the exact opposite route.

We both know that user is a customer of yours, and I imagine he'll show evidence of such eventually. You've just, once again, chosen to take the deceptive route because you see an easy out, as he bought directly from your site rather than making a contract with you here.

Once he verifies all of this, I'm going to be all over you for this.

I look forward to our future together.

Cyber Rick - January 11, 2020, 2:48 pm

Since people seem to love causing drama and bs against me on here, I have decided I won't be keeping my sales thread open.
