Thread: [\\$10 ==>> \[Customizable + Multithreaded + Sourcecode\] PROXY SCRAPER/CHECKER <== \\$10](#)

FBI - December 15, 2019, 12:09 pm

After trying multiple proxy scrapers/checkers on this site, they have all either been broken crap or extremely slow.

So I made my own lightweight version in python and made sure to multithread everything (splits up work to increase speed). This comes with 2 python scripts and a list of sources, one for scraping and one checking. You can also bring your own proxy list for the checker if you would like a much faster solution than others on the market, or online sites that share your proxies.

My only condition is that you do not resell this source on HF, enjoy!

Here is a video showing complete setup from a fresh windows 10 install and usage of the scripts:
