Thread: [vZen | Scam Bustadice Script "Vouch copies" + Multi uid=4492083 Scammed another user](#)

cryp - December 16, 2019, 2:14 pm

Thread referenced: <https://hackforums.net/showthread.php?tid=6032568>

User referenced: <https://hackforums.net/member.php?action=profile&uid=4492083>

User claimed to be giving away vouch copies to the "safest" bustadice script. As usual I went into it very skeptical ready to read the script and see the workings of it, also would like to mention the user claims the script works best on over \$70, so it was pretty clear to me after this it's likely an exit scam.

The user sent me the script over a site called "privnote" which is a self destructing paste site which only lets you view it once. This was also pretty odd as why would it need to self destruct if I have to save it to save it externally to write a "vouch".

Turns out it's a bitcoin address replacer script. I'm not providing it here as I don't want anyone to use it and lose their coin but if any staff ask for it I can provide this proof.

Proof of conversation: [Nothing onsite or pms was done, this is all discord.]

Spoiler [\(Click to View\)](#)

Partial script to prove it's an addy replacer:

Spoiler [\(Click to View\)](#)

Trust scan:

Spoiler [\(Click to View\)](#)

SIM-4086413 - December 16, 2019, 3:04 pm

Yeah he told me a nonsense story about how he was banned for contracts and therefore couldn't setup a contract but was forcing me into setting up the script lol.

Ofcourse i kept telling him no that i wanted a contract first and he became really mad Imfao, blocked

him afterwards, never used the script.

SUI-3183372 - December 16, 2019, 5:20 pm

Post a bigger snippet of code. Replace is a commonly used function and its existence alone does not mean any malicious or sketchy behavior is taking place.

MavenGradle - December 16, 2019, 5:21 pm

(Dec 16, 2019 06:20 PM)BV1 Wrote: [\[CITE\]](#) Post a bigger snippet of code. Replace is a commonly used function and its existence alone does not mean any malicious or sketchy behavior is taking place.

User posted his script in his own reference revenge thread:

<https://pastebin.com/fzSDvzug>

<https://hackforums.net/showthread.php?tid=6033396>

crpy - December 16, 2019, 5:21 pm

(Dec 16, 2019 06:20 PM)BV1 Wrote: [\[CITE\]](#) Post a bigger snippet of code. Replace is a commonly used function and its existence alone does not mean any malicious or sketchy behavior is taking place.

The code is encrypted and I will only provide it to staff to not break any rules with "leaking" his script.

(Dec 16, 2019 06:21 PM)MavenGradle Wrote: [\[CITE\]](#) User posted his script in his own reference revenge thread:

<https://pastebin.com/fzSDvzug>

<https://hackforums.net/showthread.php?tid=6033396>

It is not the same script I received in the "self destructing text" thing. The encrypted part is entirely different.

MavenGradle - December 16, 2019, 5:22 pm

(Dec 16, 2019 06:21 PM)crpy Wrote: [\[CITE\]](#) The code is encrypted and I will only provide it to staff to not break any rules with "leaking" his script.

It might be wise to compare the script you retrieved from the user versus the script he published in his own thread, essentially making it part of the public domain.

Edit: replied to quickly. That just extends upon the reliability of your thread versus his.

crpy - December 16, 2019, 5:23 pm

(Dec 16, 2019 06:22 PM)MavenGradle Wrote: [\[CITE\]](#) It might be wise to compare the script you retrieved from the user versus the script he published in his own thread, essentially making it part of the public domain.

It is different but I am still sketched out regarding sending this script due to it being something I received as a vouch copy even though it was without contract and over discord.

MavenGradle - December 16, 2019, 5:26 pm

(Dec 16, 2019 06:23 PM)crpy Wrote: [\[CITE\]](#) It is different but I am still sketched out regarding sending this script due to it being something I received as a vouch copy even though it was without contract and over discord.

I would say that since he released his script to the public, without any license restrictions, that you are legally allowed to share it, because he supposedly released it as such. It might just be a case of obfuscation having different results and thus it is different but that does not refrain from the fact that code in the public domain can be used for any purpose, as long as it's legal of course.

Not sure what the rules here state, but if I were you, I'd wait for staff, like you said in case you want to play it safe. Regardless, the fact that the scripts are different, and obfuscated are a heavy

indicator of malicious intent.

crypt - December 16, 2019, 5:27 pm

(Dec 16, 2019 06:26 PM)MavenGradle Wrote: [\[CITE\]](#) I would say that since he released his script to the public, without any license restrictions, that you are legally allowed to share it, because he supposedly released it as such. Not sure what the rules here state, but if I were you, I'd wait for staff, like you said. Nonetheless it is just a comm alert to prevent people from using the script, and since the 2 people that recieved the script said it was sketchy I doubt anyone will be using it and I believe even with some 'popularity points' lost over dickriders I am happy with the result and possibly saving a users coin.

Dotexe - December 16, 2019, 5:29 pm

(Dec 16, 2019 06:27 PM)crypt Wrote: [\[CITE\]](#) Nonetheless it is just a comm alert to prevent people from using the script, and since the 2 people that recieved the script said it was sketchy I doubt anyone will be using it and I believe even with some 'popularity points' lost over dickriders I am happy with the result and possibly saving a users coin.

LOL, you're actually really smart, after i made the comment you neg'd me and started pm'ing me, now you want to make it look like you weren't the reason you lost some 'popularity points' ? ? ? ?

crypt - December 16, 2019, 5:30 pm

(Dec 16, 2019 06:42 PM)crypt Wrote: [\[CITE\]](#) Everyone seems to have a false narrative yet the 1 month user with the scam script seems to be telling the truth ?

I wouldn't say that. How can we, in fact, have any narrative at all if we lack information? Again, since you are allowed to post his script, we can easily verify your claims if you do actually post the script you received from him.

This is by no means a personal attack, but simply a request to clear things up.

vZen - December 16, 2019, 5:46 pm

(Dec 16, 2019 06:45 PM)MavenGradle Wrote: [\[CITE\]](#) I wouldn't say that. How can we, in fact, have any narrative at all if we lack information? Again, since you are allowed to post his script, we can easily verify your claims if you do actually post the script you received from him.

This is by no means a personal attack, but simply a request to clear things up.

The sad thing is he can't even make up a scam script because of how bustadice functions.
He's an absolute clown.

Dotexe - December 16, 2019, 5:48 pm

(Dec 16, 2019 06:45 PM)MavenGradle Wrote: [\[CITE\]](#) I wouldn't say that. How can we, in fact, have any narrative at all if we lack information? Again, since you are allowed to post his script, we can easily verify your claims if you do actually post the script you received from him.

I agree this is definitely the best way to resolve this.

Pawnhub - December 16, 2019, 8:15 pm

Just post the script man it's really not hard, you were approved from the seller. We can compare copies also the replace function means nothing ATM that's not hard evidence.

Shisho - December 16, 2019, 11:51 pm

Since the script isn't really encrypted and is just encoded and obfuscated in base64 and hexadecimal character sequences there should be nothing stopping you from checking what the regular expression patterns and strings are.

If you provide the original script in this thread I will post a dump of decoded strings.

335i - December 17, 2019, 12:00 am

So basically you made a fake comm alert for no reason lol

Stop trying so hard to cover your tracks just junk the thread mate

lol - December 17, 2019, 3:02 am

Looks like OP is a lying piece of sh*t

Deadmau5 - December 17, 2019, 4:16 am

I simply don't understand why you can't post the script that vZen has sent you even though you have his permission to do so. I'm pretty sure that will clear things up.

vZen - December 17, 2019, 5:42 am

(Dec 17, 2019 05:16 AM)Deadmau5 Wrote: [\[CITE\]](#) I simply don't understand why you can't post the script that vZen has sent you even though you have his permission to do so. I'm pretty sure that will clear things up.

Because he can't even make up a malicious bustadice script, that's why no input from his side.

nCuX0 - December 17, 2019, 5:46 am

looks like OP has been kicked from the group

SUI-3183372 - December 17, 2019, 6:01 am

BV1 he can't provide the script because it's impossible to make a bustadice script that would steal btc or act in a malicious way, he's both ignorant and manipulative.

The funniest thing is he can't even make it up, thus the lack of delivery on his part.

cryp - December 17, 2019, 11:24 am

I went to sleep, I can't provide the script as I didn't save it outside of PrivNote, thank the guy who uploaded the text on there. I at this point don't care to be correct. I have sources that came forward to prove OP is a multi and a scammer. This is a community alert to help you guys, I really don't mind if you don't believe me and you trust him instead. That's on you. At the end of the day, this is a forum. I'm here to relax and talk to some people, not to be called out on some shit I know isn't true. I'm going to move on with my life and vZen can take this as a win. Don't be surprised if he exit scams again though, proof hes a scamming multi (outside of the script) is still in this thread.

The funniest thing is he can't even make it up, thus the lack of delivery on his part. I don't know if that's true since the script is run in a browser and I see functions that manipulate cookies. I could be wrong since I've never used Bustadice but as far as I can tell you can do anything you could do in JavaScript with a Bustadice script.

When I sit down I could decode the base64 encoded bytes and delimit the arrays of hexadecimal characters with variable declarations and then build strings from them to see what it is really doing. I see MP3 files from an outside source so it can make HTTP requests; what stops it from importing a JavaScript include from an outside source built from an array of hexadecimal?

removeCookie, updateCookie & setCookie are all inside the script

Correct me if i'm wrong, but your script is just this one <https://bustadicescripts.com/thread-20.html> but with the added cookie functions and encoded.

Whats the purpose in these functions?

Bear - December 17, 2019, 3:04 pm

All users on here skids, including me. Any script or shit you see, assume its from code canyon, github or scraped from somewhere else by some skid using some skid script.

If you address HF with that attitude, your life will be much smoother. Trust me, its been working since 2011.

MavenGradle - December 17, 2019, 4:39 pm

(Dec 17, 2019 04:04 PM)Bear Wrote: [\[CITE\]](#) All users on here skids, including me. Any script or Clay Davis you see, assume its from code canyon, github or scraped from somewhere else by some skid using some skid script.

If you address HF with that attitude, your life will be much smoother. Trust me, its been working since 2011.

I will not disagree with the comments you made about yourself but I would suggest against this

thinking strategy and instead only assume something is copy pasted when proof is available.

If you address HF with a neutral attitude, you have a chance of maintaining logic in your thinking process, and are open to all outcomes.

Anyway, I find it ridiculous how a screenshot of the script was provided but OP lost the script regardless, it seems too coincidental. The lack of a script is also a complete lack of evidence of the claims that the script is malicious. This is called critical thinking. In my honest opinion, without a script, this thread is partially without proof and ungrounded.

(Dec 17, 2019 03:54 PM)BruceTheMoose Wrote: [\[CITE\]](#) removeCookie, updateCookie & setCookie are all inside the script

Correct me if i'm wrong, but your script is just this one <https://bustadicescripts.com/thread-20.html> but with the added cookie functions and encoded.

Whats the purpose in these functions?

MavenGradle - December 17, 2019, 4:47 pm

Your comment proves nothing, since you have no script to talk about. Please provide a script before making claims, thank you for understanding. It's not that hard. Unless you are suddenly confident enough to claim that the script vZen posted is indeed your script, which a couple of pages ago you claimed is completely different to your script (which you now claim to have lost, so how could you even make those claims?).

Cookies can be updated for various reasons, you heard it here first..

Cookies can be read and manipulated for various reasons, which most browsers use to store session data or arbitrary data returned to the website for functionality. This means that allowing a script to access your cookies could potentially lead to unwanted activity. iframes can only access cookies belonging to the parent domain and subdomains but, for example, if I was able to read your Hack Forums cookies I would be able to steal your Hack Forums session and masquerade as your user and do whatever I wanted.

Since a Bustabit iframe can access Bustabit cookies the questions becomes "What cookies does Bustabit store?" and "What consequence does running a script that manipulates these cookies present?".

As far as I can tell these cookie functions are used to store bet/play counter data but what's the point of regular expression patterns if you know what cookie data you want to manipulate if you are the one setting and manipulating the cookie?

That's exactly what the cookie function is used for storing the counter data (so the script wouldnt lose connection during network issues), there is nothing related to the session cookies involved which you can confirm if you took your time with the script.

It's funny how he refuses to apologize and would rather act a victim the whole way.

Dotexe - December 17, 2019, 5:31 pm

Not even surprised how all that ended. OP should apologize for all the drama he caused.

Shisho - December 17, 2019, 6:02 pm

Yes, he did refuse to apologize and victimized himself and other users before analyzing the script in depth.

These is the array of base64 encoded strings decoded (I will delimit them with newlines when I get the chance)

```
Code Shisho@shisho-laptop:~/Documents$ cat base.txt | base64 -d
total_winsWin rate x: getWinRateCurrent game seed difficulty is
getSeedStatetoFixedhttps://freesound.org/data/previews/274/274178_5123851-lq.mp3onendedTill
reset | - / +Recovery attempt: stopScriptScript recalculated lock profit stop and loss stop; new values
are:Stop loss messageConnection closed. Restarting scriptinsufficient balanceNot enough balance
to betstopstringconstructorcounterdebuggercallactionstateObjectapplyfunction *( *)\+ \+
*(?:_0x(?:[a-f0-9]){4,6})(?:\b|\d)[a-z0-9]{1,4}(?:\b|\d))inittestchaininputbetProbvaluecalcPrcwhenToSt
opwhenToStopProfitbalanceroundbaseBetbetMultprobplayingmssppushlogCreated target
updateplaybetintervallinglengthmultiplier | frompayout bits | To recover
rollstartgettotal_rollsseekFoundseekFoundMaxreset_rolls_afterSeed Alert class created.startseek
```

There is a function that constructs strings from hexadecimal character codes and there is a function that converts hexadecimal character codes to other character codes using a bitmask and bitshift operation as seen below:

Code 0xff & _0x4656bf >> (-0x2 * _0x413f46 & 0x6

I have yet to emulate the code and dump these built and converted character codes and construct strings from them but I will do that as soon as I get the chance as well.

I do not vouch for you as of yet but soon I will confirm what these functions actually do.

SIM-4086413 - December 17, 2019, 6:06 pm

As opposed to other users in this thread I find deobfuscating code to be fun and since this is an interesting topic with interesting accusations and insinuations it is bound to have a persistent level of activity.

(Dec 17, 2019 08:08 PM)Bear Wrote: [\[CITE\]](#) I will believe otherwise if ever, someone does anything to change my mind here. It's been 9 years so far.

I do not believe anyone will go out of their way to prove you wrong but I do believe there are many members on this forum capable of creating a piece of software that isn't a copy of an existing piece of software found in a readily accessible version control or text storage service.

I can agree that your manner of thinking is averse to risk but it is also insulting to any developer that takes pride in their code.

Shows how retarded you are. I didn't mention VPNs lol... You both have community alerts open on each other, means you're trying to use your HF reputation against another member, and it won't work.

Been around HF since 2012. I've seen it all before.

Spoiler [\(Click to View\)](#)

I can confirm that the regular expression pattern in question is used to remove curly braces,

parentheses, brackets and slashes as well as semicolons which are regular parts of the code to provide valid hexadecimal characters. This is part of the obfuscation. As someone pointed out, it seems like he may have attempted to sell a script found on another forum and obfuscated it to make it look like it was a different script when it in fact was not.

The last part is entirely not true, as the coder is Ruzli which was the original creator of the script. If it got leaked that's not something we were aware of at the time.

No offense to you but it's not like you, the seller, would admit to using a leaked script so this means nothing here

Well if you contact the coder it will mean quite a lot.

Just leaving it open for confirmation.
