Thread: [Geolocation!?](#)

EnactTheGhostProtocol - December 22, 2019, 6:02 am

Is it possible, that if you go on IPlookup.net via a VPN, that if you click "show precise location" that is bypassing your vpn!? Also, is it possible, that since the website can do this, that a hacker could also do this!?

Bulma - December 22, 2019, 7:18 am

I think everything is possible, mate.

It's suspended now.

It's relatively hard to pin-point your location unless the victim clicks on the prompt to allow location. IP Addresses typically point towards the closest ISP node, which could be either 10m away of 10km away.

Anything is possible my friend, just because you're using a VPN doesn't mean you're safe
