Thread: [AES-GCM-256 in C#](#)

draxyee - December 28, 2019, 8:49 am

Can anyone help me encrypt a string with AES-GCM-256 using C#?

Appreciate the help. ?

Morpheus - December 28, 2019, 8:52 am

You can just use [AuthenticatedAesCng](#) class in [Security.Cryptography NuGet](#) package from Microsoft to do encryption/decryption.

Do you have any sample code perhaps?

I saw this answer somewhere else, but I'm somewhat lost.

Yes i've copy & paste the answer because i've used this method and it worked.

Where are you lost ?

Could you provide maybe some sample code?

MavenGradle - December 28, 2019, 11:24 am

Did you try searching for your problem? It's literally the second result on google:

<https://www.codeproject.com/Articles/1265115/Cross-Platform-AES-256-GCM-Encryption-Decryption>

Something tells me you're trolling in the coding section. How about you get your character set knowledge up to date before performing encryption? That would seem more fitting.
