Thread: [Keyless start on Cars](#)

vessve23 - January 3, 2020, 9:58 pm

Hello! Is there anyone who have experience with car stealing.. especially experience with devices that copy car key info and manipulate the car (car is thinking that key is inside) (only cars with keyless start) so that you can drive ! I am interested from where I can buy this device or how i can build it!

rdgreen88 - January 4, 2020, 2:47 am

you can youtube how to hack the RFID and go from there.

jamescharles - January 16, 2020, 6:24 am

break down the project you are trying to do into smaller steps

huso42 - January 17, 2020, 5:21 am

you could just make the car learn your new blank key via odb as far as i know.
but im not into that kind of business.
i like taking apart stuff and modify stuff.
stealing stuff irl is not the way i d go.

Theres a good article on wired thatll give you give you a good idea. I cant link you but Samy Kamkar briefly explains the components he used on his simple 32\$ setup.

feel free to pm :thumbsup:

there are multiple ways you could go:

1. a kind of repeater for the key signal (you gotta make shure the car doesnt turn off as it wont turn on without key signal anymore)
2. learn a new key to the car (you´d need to block the close command) (how its married with the key is depenand on the car manufacter, just look up some tutorials for the specific car often you dont even need anything else then a open car and a new key) (a friend of mine told me there is a china device that makes learning new keys effordless. i guess it has either a exploit or just brutforcess but i never)
3. just get physical access to the key
4. there are some universal key grabbers on the internet (search prodecoders grabber) but i dont know if they work as telled and they usually are like 5-10k.

for a repeater and a jammer you should find some diy tutorials on the internet.
the devices could be a bit harder to find but u could try looking at some shops that sell questionable electro stuff or just stuff thats not that legal in your country.

The key fob must be inside the car for the car's computer system to be able to connect with it, allowing the driver to start the car simply by pushing a button.

It's a transmitter that sends a low-frequency signal to the car. This signal is unique to that vehicle; once the fob is inside the car and you press the button, the car's receiver picks up the signal and sends power to start the engine.

pollege - *March 12, 2020, 6:13 am*

It's a simplex repeater of the Key...It extends the signal ti the car
