Thread: [\[Help\] Affect Subdomain ONLY \[.htaccess\]](#)

draxyee - January 8, 2020, 6:14 am

I have:

<https://example.com>

and

<https://tools.example.com>

I want it so that whenever I visit : <https://tools.example.com/test.html>, it brings me to <https://tools.example.com/test>

So basically I want to remove the html extension from the subdomain.

```
RewriteEngine on
RewriteCond %{REQUEST_FILENAME} !-d
RewriteCond %{REQUEST_FILENAME}\.html -f
RewriteRule ^(.*)$ $1.html [NC,L]
```

This only works for the domain, not the subdomain ^

You need to use the following and it should work.

```
Code RewriteEngine On
RewriteCond %{REQUEST_FILENAME} !-f
RewriteRule ^([^\.]*)$ $1.html [NC,L]
```

```
Code RewriteEngine On
RewriteCond %{REQUEST_FILENAME} !-f
RewriteRule ^([^\.]*)$ $1.html [NC,L]
Incase that didnt work op try this:
```

```
Code Options +FollowSymLinks -MultiViews
RewriteEngine On
RewriteCond %{REQUEST_FILENAME} !-f
RewriteRule ^([^\.]*)$ $1.html [NC,L]
nano /etc/apache2/sites-available/000-default.conf
```

and paste the following code at the bottom:

```
Code <Directory /var/www/>
Options Indexes FollowSymLinks MultiViews
```

```
    AllowOverride all
    Order allow,deny
    allow from all
</Directory>
sudo a2enmod rewrite
sudo service apache2 restart
```
