Thread: [2020 Undetected Web SHELL "Updated"](#)

imkk99 - January 13, 2020, 3:18 am

Hello

I need a Web SHELL script which is undetected and new updated

I have searched whole internet and found old shell scripts, when i upload it to any server its not working because its detected by server antivirus,

Then i uploaded to my own server and checked that yes its all detected, old c99 r57 and many more are not working,

Please suggest me any good shell script for 2020,

Thanks, and plz send me message of post the name here so i can get it from website or developer,

Thanks

If you really want to go stealth, I'd recommend nano.

<https://github.com/s0md3v/nano>

It's undetectable by most static code scanners.

yuza - January 14, 2020, 1:23 am

personally i use system() function to execute

It's undetectable by most static code scanners.

I'd also recommend nano, I've had a lot of luck using it in the past and seems like it would be perfect for what you're looking for

is there any tutorial how to use nano ?

plz send me if it have, i need it.....

i just used wso b3t4k and some others which are easy to use,

plz send me any tutorial for nano

RTFM dude

thanks, let me see it

HackerGood22 - January 22, 2020, 2:09 am

I can have one scripted

But it will cost you

Don't go for free bullsh*t shells, buy magneto and you will be fine ;)

I4stl00k - March 19, 2020, 2:20 pm

im just use shell_exec or system()

player92 - March 20, 2020, 1:12 pm

"scripted" ??? !!! maybe crypted - do not trust this idiot

hello, i have private crypter for php shells if you want dm me :) undetectable
i have also custom shell made in perl with crypter too and with cookie auth or bash shell

wso3 - March 22, 2020, 4:49 am

I've been working on this webshell if you want to check it out: github.com/wso3/wso3
