Thread: [NanoCore Not Working](#)

xShadowNight - January 17, 2020, 5:47 am

I got NanoCore a couple of days ago, and I've got the setup process and how it works down. When I run the RAT on my computer, everything works fine, but when I try on my VM or on my other laptop, nothing connects. The problem isn't ports or anything related to WiFi as far as I know, my ports are open and listening, and I've confirmed many times. I decided to run the rat with debugging turned on and it fails to read settings from settings.bin. When it then tries to connect to the host I get this error:

Client Exeption ():

The I/O operation has been aborted because of either a thread exit or an application request

I have no idea what this means, and I haven't seen anyone else with this problem. I tried moving the settings.ban file along with the RAT executable but that didn't work. The program searches for a settings.bak file if the settings.bin hasn't been found, and of course it can't find that either. Is there a path I should be using?

do not use nanocore

also it probably antivirus

turn that off on vm n laptop ? ? ? ? ? ? ? ? ? ?

Seriously I can list 7 reasons not to use nanocore

Outdated

Fedware

Overused

Detected

(Probably) Backdoored

It's NANOCORE.

Owner was arrested

Ok! I won't use NanoCore! Thanks!

Kayfox - January 18, 2020, 5:31 pm

you can use async, quasar, lime, like
MOST OTHER RATS

Mafulen - January 18, 2020, 5:33 pm

Nanocore is outdated and overused, give a try quasar.

dboylogz - September 15, 2020, 9:09 pm

get something more recent mate

DI?E - September 15, 2020, 10:43 pm

Why would you use a cracked version of Nanocore without researching it? Word of advice is DONT
USE NANOCORE.
