Thread: [What happened to Cain & Abel?](#)

Equality - January 18, 2020, 9:56 am

Hi all,

I know this may be really old to ask, but i was looking to download cain & abel and the website seems to no longer be existent.

Is there a new tool that people are using that replaced it? i know there was issues running it on Win 10.

Sorry if this is a stupid question, i have taken a lot of time off from HF and other areas.

Thanks,

Eq

Believe they just stopped supporting it or something a long those lines. Not sure if there was any problems legally but as far as I'm aware the creators must've moved on to something new. I assume of course.

Most downloads out there now have a lot of adware with them or some sort of malware unfortunately, however I am sure there is a clean version.

I used to like using a lot too but as you said there are problems using it on most versions of windows 10 too.

What are you hoping to achieve with this if you find one?

That's unfortunate, always liked hitting the "nuke" button. I have been using CommView instead, just thought id ask and see if anyone knew!
