Thread: [Fluxion](#)

dhxzc - January 19, 2020, 9:53 am

hello my friends ?

i need some help with Fluxion.

i don't know if i do something wrong,or Fluxion is totally useless ?

i run Fluxion on Kali latest version in a desktop pc.

i go to test only my own router and wi-fi !

i use the alfa AWUS036H,and i get the handshake very fast,under one minute.

i start the evil twin attack,on my own router and wi-fi.

i have a other desktop pc connect on ethernet who run on youtube with a video,and my laptop the same run on youtube with a video on wi-fi.

Fluxion start the attack create the fake access point,but my desktop pc is not disconnect from the Internet,the youtube video still run ?

only the laptop who run with wi-fi , is disconnect from the internet for a time between 40 and 60 seconds,after this windows reconnect me automatically again on

my wi-fi,because i have my wi-fi password save on my laptop,and youtube video run again without any issues.

what i do wrong my friends ?

why Fluxion don't stop all my internet from the router,ethernet and wi-fi ?

and ask me for the password on this FakeAP ?

or is Fluxion really totally useless my friends ?????

I believe that you do not understand what fluxion does, what it is meant for.

Read fluxion help documents and some presentation first, then you'll get idea of what it is and for what it can be used

thank you for your answer pomwtin,

you have right i am new with Fluxion,i want to learn to used yes. ?

i read this tutorial from here my friend

<https://hackforums.net/showthread.php?tid=6025880&highlight=fluxion>

and i follow step by step.

as i say works all fine ,till to the point my internet don't get disconnected ?

Fluxion stop only the wi-fi connection for 40 -50 seconds before windows connect me again automatically,because i have the wi-fi password saved on my laptop.

i was thinking Fluxion have the power to stop all my internet traffic.

and then I would only have 2 options :

first to restart the router

or

the second option to put my wi-fi password in the fake access point,to can access the internet again

why Fluxion don't stop all my internet traffic,and forced me to handle my friend ??

maybe i do something wrong idk,but i have really follow step by step this tutorial ?

can you help me with some advices my friend ? ?

To answer this

Fluxion is for wifi password cracking.

Not for ethernet connected devices.

Using the mitm function of fluxion is meant to be for devices on wifi
