Thread: [RAGNAROK Crypter Source Code \[START YOUR OWN CRYPTER\]](#)

Tostig - January 22, 2020, 7:02 pm

First things first, why am I selling this? There are a few reasons, all of which are enumerated below. I do not have the time, patience, or energy to run, sell, maintain, and advertise this project, and haven't for some time.

I no longer have any interest in malware, cryptography, and the likes.

I see no benefit to having this rot away on my HD.

Secondly, why would you buy it? There are many things you can do after purchasing this source code. Never pay for a crypter EVER AGAIN. Maintain it yourself and ReFUD on your own. ReFUDs will be few and far between since you'll likely be the sole user.

Pull the age-old "buy a crypter source and pay a 3rd party developer for ReFUDs on a periodic basis, and sell licenses for \$20".

Literally whatever you want. Rework it and re-sell the source code, whatever.

Here's a full feature list with some photos of the UI:

- Custom Icon
- Custom RunPE
- Crypts Native and .NET Assemblies
- Unique Storage Method (Bypass Avira)
- Inject into RegASM, VBC, or Self
- Startup/Persistence Module
- Custom Process Name
- Custom RegistryKey/Folder Name
- ExecutionDelay
- AntiVM/Sandbox
- Fake MessageBox
- Custom MessageBox Buttons
- Custom MessageBox Icon
- Custom Assembly
- Clone Assembly
- File Pumper
- Icon Changer (change icon of Crypted output)
- Polymorphic Encryption
- Output Obfuscation

Coded from SCRATCH. Nothing is C+P.

Spoiler ([Click to View](#))

Now, the asking price for the source code is \$100 BTC. I'll sell 3 copies. However, if you want to be the ONLY one to get the source code, I'll sell that for \$250.

The price of paying someone to develop you a brand new crypter is way beyond what you'll pay me for a copy of my private source, which has never been distributed anywhere and is 100% original.

Feel free to ask questions. Contact me if interested.

Looks interesting. Were your past customers happy with that product?

Tostig - January 22, 2020, 7:13 pm

I had one complaint. As far as I'm aware, the issue was resolved. Overall customers were satisfied.

Windows Defender looks too deep into anything .NET

Can you add a current runtime scan?

Yes a runtime scan would be appreciated ? (not a fake scan with putty or other fud file)

A runtime scan isn't necessary. The project is 6 months without a ReFUD. It's going to be detected by even the shittiest of AVs.

It's pretty clear that it's a functioning crypter, and the only thing missing is a ReFUD/someone who cares about it.

I'm sure it's very detected.

As stated, it's clearly detected. No need for a scan.

Sole source ownership is still available. For questions, PM me or post on the thread.

1stetcgoldmedal - February 16, 2020, 7:26 pm

Trading.

I'll write it to the thread after completion.

All rights have been given.

Thank you for a good deal.

1stetcgoldmedal - February 18, 2020, 6:21 am

It's not over ? .. Can you delete this thread ?
