I don't like it. There are so many things that are wrong. Just go to the big hosts and see how their homepages look like. That is what converts. That is what you have to create.

There's so much wrong with this, but before anything else, search online and learn about basic typography design principles. The text looks really bad. Font choice, the strokes, the bevel lol, everything about it.

First fix the typography, then we'll help with the rest.

Is it your first time? You need to work on the colors and the fonts. You can do it. :)
