Thread: [Need help with arbitrary file upload](#)

crusader. - January 23, 2020, 7:29 pm

So I found this website it has an upload form, its vulnerable as well.

It allows me to Content-type: application/octet-stream and lets me successfully upload my shell.

It doesnt have any filters or anything in place.

Trouble I'm having is, trying to find the upload path.. I viewed the source, used fiddler capture the requests. Anyone please PM me or something and help. Will pay or give something for helping a friendly person out.

You can't really. Check stuff like /images/ /assets/ etc.

Unless you upload a massive file (or probably 500MB) and cause PHP to throw a move file error
