Thread: [A browser extension that automatically detects new cookies and copies them?](#)

SIM-4500658 - January 24, 2020, 9:18 pm

I was wondering to myself something that I know has to exist; I'm sure, I'm not the only person to have this idea.

But searching for it didnt help. ?

I am not sure where to post this but here it goes anyway..

Picture this, a discreet chromium or firefox extension that automatically detects incoming cookies and instantly copies the "data" elsewhere.

So what do u guys think? can I obtain it?

By the way this is my first real post here so be nice and helpful..

I don't know of any extension off hand. I suppose you could just delete all your cookies then use a basic python script to copy them.

So I dont fully understand how cookies and websites work so i asked this question

[quora.com/Why-cant-I-log-in-a-website-that-I-have-saved-cookie-data-from](https://www.quora.com/Why-cant-I-log-in-a-website-that-I-have-saved-cookie-data-from)

I would appreciate it if someone replied there..

My guess is that everytime u log out, the old cookie gets expired, u get a new unique cookie when u log back in and u cant use the old one...

i got only one reply here, i guess This place is deserted..
