Thread: [New Posts on the mobile version of the site not showing up](#)

Shisho - January 25, 2020, 11:31 am

I use the New Posts feature on my PC often to find threads people are actively posting in and also to find new things to read. I can't seem to find that option in the mobile version of the site and I have had to manually bookmark it in my browser so I can see these recent posts. Is there any way a link could be added to the Navigation drop down?

Also, other links that seem to be missing but have some use are My Threads and My Posts which could be added to the drop down when you click your avatar although this can be already be done by going to your profile and clicking Threads and Posts.

Thanks.

Mobile navigation is a bit awkward...

Click on your profile pic in the menu bar, then on the pencil icon.

Oh, it has been there the whole time. I think that my problem is solved.
