Thread: [Wuhan Nurse Reveals the Truth of the Coronavirus](#)

Goople - January 26, 2020, 5:08 am

A nurse from Wuhan China revealed the truth about the current situation of the Novel CoronaVirus(NCoV), she said that there are over 90,000 confirmed cases in China. The virus is so dangerous because one person can infect up to 14 individuals and more if not treated.

She's asking us to spread this to everyone, please read and share for awareness!

Source: [youtu\(dot\)be/yQfIXs0jZ9w](#)

Anyone can fix the video link since it won't allow me yet to put url.

normaldeve - January 26, 2020, 5:27 am

90k is a lot. its like ive heard about corona virus for first time 3 days ago and then yesterday it already infected 90k.

now it can actually be about 300k of infections just that you dont know about them yet.

china clearly doesnt control it and its possible that they will be all infected/wiped.

also you can lock borders all you want but eventually it will spread to other countries as well. you cant really stop such huge population as china's

holy she actually begged for masks and say that they are out of resources

Exalted - January 26, 2020, 5:42 am

I doubt that there are 90k+ infections already, but then again, it could be possible.

There is a map available [here](#) that shows the following statistics:2k+ infected

50+ deaths

40+ recovered

I think it may be higher a Video I seen early of someone suppose from Wuhan they said up until Jan 22 it was normal there no mask, no closing, etc. if that is true with a two week incubation period there's a lot more infected then early believe. But this is just my opinion and not based of any concrete evidence.

Geralt - January 26, 2020, 5:59 am

As long as you are not a 50+ year old with a weak immune system it won't kill you

if gov said about 2k infected and 50 deaths, and its in reality 90k infected, then it means theres 50 x 45 deaths = 2250+deaths

Big brain time.

I don't think he's wrong though.

Don't panic just yet.

The other "control decease centres" and doctors claim it's nothing but a 'strong flue' which is harmless for the healthy persons among us. I wouldn't believe a "nurse from Wuhan China" as they have 0 human rights there, which means they are influenced by the government too much to speak freely on TV / interviews.

That might be true; I do believe that there are more infected than that map that I shared says, but we don't know for sure.

Nice calculation, you might be right, but we'll have to see.

Django - January 26, 2020, 7:00 am

Don't let any of the scaremongering get to you guys. It's always the same bullshit, with the exact same effects for us.

V?rt - January 26, 2020, 1:48 pm

That's wild, from what the map shows, there are already cases inside of the US and Canada. It's pretty like crazy.

Money- - January 26, 2020, 8:37 pm

Sooner or later I feel China getting wiped out and some guy wanted to kamikaze for their country and spread it through other country

Crypt - January 26, 2020, 8:48 pm

2,300 seems to be the number of infected but if one person could really infect 14 people, then I could see it spreading very fast, especially in a place like China.

I think they will get it under control but I could see another event like the black plague to happen again, especially because world travel is so much easier now. Hopefully, the scientists/CDC stay on top of it.

That chick looks like she is on mars.

What is the country doing to help get rid of this virus ?

It might sound terrible but 50 deaths doesn't sound really like a lot ?

Nate - January 31, 2020, 12:44 am

Seen this too, I def believe china is covering up.

Quarantine is like one of the last results.

Basstracer - January 31, 2020, 12:54 am

well 10k confirmed, just imagine all the mild cases, this could be far bigger than we suspect.
