Thread: [Image not showing on button while running program](#)

darkdev315 - January 29, 2020, 12:44 pm

Hello, I've added some 16x16 images for my buttons, I see them in the Form Design but I can't see them while starting the app. I added them into Resources then to BackgroundImage for each button.

example: [Here](#)
[And here](#)

You probably haven't changed build action from none to resource on the image which you insert into resources.

Thanks for your reply. Can you tell me exactly where I have to look for that option?

If you are talking about ImageIndex, ImageKey or ImageList on the Properties tab, they are both on (none) but I can't change them from that.

LE: Now it works. I had an error on my code and it ran previous saved debugs where I didn't had the images on. I'm such a newb.
