Thread: [Adobe is a RAT - NOT uninstalling/reinstalling - Breaking SYS32 files](#)

rSM- - February 2, 2020, 9:49 pm

I've tried uninstalling and reinstalling adobe CC (I have a premium license / NOT CRACKED) and every time I try and uninstall it, it throws errors such as CRLogger.exe and IPCBroker cannot open correctly. I've manually deleted every adobe file from my computer and started fresh and its still throwing these errors when trying to uninstall and reinstall. Adobe seems like a piece of shit when it comes to uninstalling. Anyone have any ideas?

If this isn't the right place for it, please move it to the correct place. I posted my issue here because at this point Adobe feels like a fucking virus that won't go away and I need help.

Is the process IPCBroker.exe or is it AdobeIPCBroker.exe?

The later is the genuine process used by Adobe Creative Cloud.

If it is located somewhere outside of your Program Files Adobe folder let me know.

Also what is the size of the executable?

The normal Size is of the file is 26,336 bytes.

Also I do bot believe adobe has any process nsmed CRLogger.exe. If it were CrLogTransport.exe that would be a different case. Take the same measures as I mentioned above for analyzing AdobeIPCBroker.exe

that would be a different case. Take the same measures as I mentioned above for analyzing AdobePCBroker.exe

AdobePCBroker.exe and CRLogTransport.exe. I also cleared every Adobe file from my computer and used the CC cleaner tool to completely wipe everything. After trying to install AE right off the site again, I still get the same AdobePCBroker error. I've followed your steps to a T and still getting the same error. The filesize is also the same as you mentioned.

-- EDIT --

I take that back, AdobePCBroker.exe is only showing 1,070 kilobytes even after being completely reinstalled, and the error still shows up.

Hello dude,

Seems it's a known issue, regarding this article on Adobe's website :

<https://helpx.adobe.com/photoshop-elements/kb/AdobePCBroker-prevents-uninstall.html>

Please can you try to kill the process and install/uninstall ?

I fixed it already, or rather Adobe live support fixed it. My issue was that my C++ Redistributable packages all needed repairs, so after that was done I was able to use all Adobe products again.
