Thread: [How is this PC build for 4k video editing](#)

VideoGrapher - February 3, 2020, 7:04 am

[PC Build](#)

I would really like the Ryzen 9 CPU, I'm an AMD fanboy and don't really care for Intel.

My budget is \$1500 but I would like to be a little cheaper if possible.

Breeze26509 - February 3, 2020, 1:43 pm

I wouldn't buy a Crucial P1 as a scratch/editing drive. I'd buy something like a Sabrent Rocket or Silicon Power A80 instead.

webdev77 - February 3, 2020, 4:59 pm

I'd also recommend a gold or platinum rated power supply. It's 2020 and there is no reason not to. You will literally save the extra money off your electric bill.

VideoGrapher - February 5, 2020, 3:33 am

So based off of the past 2 comments, I made a few minor changes

[Changed](#)

One thing I would like to also mention that I failed to mention in the post itself, I have a 512GB Intel M.2 SSD that I was going to use as well as having another SSD in the build.

For video editing and rendering;

After Effects

Audition

Cinema 4D

Photoshop

Premier

The power savings still wouldn't be that much. The base of 2020 should be bronze AND modular.
