Thread: [How to stay anonymous using 4G LTE wifi router?](#)

DarkHarvester - February 6, 2020, 11:22 am

Going to be hitting the road as a truck driver very soon and want to be able to use my laptop while over the road. Was going to buy one of those 4G unlimited data routers so I don't have to worry about hotspot data caps and throttling. I was wondering will this WITH a vpn be more or less secure than a regular home internet with a vpn? If this is less secure, do you have any suggestions for mobile internet that at least OK speeds? Thanks guys

It's the same. You need a VPN for both.

with a vpn you will always be safer if you don't have a vpn yet I advise you to use protonvpn its privacy protectet fast and secure

Dafuq - February 8, 2020, 11:03 am

Buy a VPS located in a country that does not cooperate with other countries, setup an OpenVPN server, connect to it using OpenVPN client. Remain anonymous!

Don't just rely on a VPN, a VPN counts towards a small percentage of your privacy, your browser entropy is a large part as well as your overall browsing patterns, history etc.

I suggest you buy this lte modem : <https://www.asus.com/Networking/4G-AC68U/>

https://www.asus.com/media/global/products/rX3sOGfL1DCIXCPn/P_setting_000_1_90_end_500.png

you can add in lte a vpn, and you can connect from computer with another vpn

hannalexise - February 20, 2020, 8:55 am

Have you thought about using Tor?

buddy give me a hint how to connect to tor with an openvpn like app so that i can pass all traffic from the desktop to tor

tor looks like nice but hackforums does not work over tor

op's not doing some big cybercrimes, i am pretty sure op just wants to use his laptop on the go while keeping all his info secure as he's using lte.

socrates998 - October 25, 2020, 4:08 am

great bro! i will think about it!!
