Thread: [Builder / Stub](#)

jBarrel - February 10, 2020, 5:59 am

Hello, i'm struggling with VS2019 and a project. I need help from someone to be able to help me with resource manipulation, i'm trying to use [this](#) tut (that works with c (not ++)) and devc++.

Thank you in advance to everyone who can help me

Charger - February 10, 2020, 6:05 am

I gave up on c++ builder.

I just have a script to copy my production folder to a new folder, replace strings/values, and then run the compile script.

Definitely not ideal but it works.

Not so suggested with big projects

Right, for your needs that won't work.

Could you post more info so we could understand more why you're "struggling" ?

akali - February 10, 2020, 6:51 am

That code should compile fine with any C or C++ compiler. You probably don't have an IDE set up properly or compiler installed.

google "Adding, Deleting, and Replacing Resources", everything on msdn

jBarrel - February 11, 2020, 1:19 am

Already done my bro, i'm facing problems finding the res

Already done my friend, i searched everything, i studied and i tried

The only strange thing is that the same source will compile and run under Devc++ but not with Visual studio 2019

Hmm that is strange, devc++ is like early 2000s though :P

Did you get in the vs2019?

Backbone - February 14, 2020, 2:47 am

Care to share the code you're currently using. It would help us to understand where you struggle.
And also why are you still using devc++ if I may ask?
