Thread: [Unpacked/Deobfuscated file not opening](#)

SIM-3602297 - February 18, 2020, 1:09 pm

Whats going on:

I've unpacked a file using BoxedApp. However, after file has been unpacked from BoxedApp it no longer opens up. It just loads for a bit but doesn't start.

I debugged it in dnSpy and released that file missed from dlls - however i added all the dlls necessary and now i'm getting this error when trying to run the unpacked exe:

So basically i'm trying to run the file i've unpacked from BoxedApp Packer, and it's giving me the error as shown in the image.

"An unhandled exception occurred in Taskmgr.exe (46040)

Exception: System.TypeInitializationException

Message: The type initializer for "DriverProgram.Form1" threw an exception."

I need help to get this file to work...

The code is now readable, you can hold ctrl+click on form1() to show its code, on the typeinitializerexception, i always get that when theres a dll error, maybe its dependency is not loaded successfully, please check the configuration

A type initialization error means you may be using a bad or null variable in your constructor of the form class or any subclasses constructors

Like for instance

```
Code Public CustomClass customClass = null;
```

```
Public Form1(){
```

```
    customClass.DoSomething(); // customClass is still null on init
```

```
}It won't always show up as a nullreferenceexception sometimes it can be disguised as a type initialization error
```
