Thread: [Hiding The Black Command Prompt](#)

iGnite - August 11, 2010, 7:30 pm

Hiding the command prompt isn't that difficult to do...and below I've created a simple script that can be used to do just that...The prompt will display momentarily...Then your batch code will run hidden...?...I hope this is useful for those of you who are tired of that old dried up black prompt getting in your way...

As usual leave comments & criticisms ?

```
Code @echo off & @break off & title _
if not [%1]==[] goto :%1
    call %0 root e i a o u s t c
exit
```

```
:root
%3f %2x%3%7%8 %1.vb%7 %7%8%4r%8 "" "%1.vb%7"
    %2%9h%5 %7%2%8 %5 = %9r%2%4%8%2%5bj%2%9%8("w%7%9r%3p%8.%7h%2ll") >
%1.vb%7
    %2%9h%5 %5.r%6n "%~0 %7%9r%3p%8", vbh%3d%2, %8r%6%2 >> %1.vb%7
    %7%8%4r%8 "" "%1.vb%7"
    %2x%3%8
```

```
:script
REM Type your script below here
```

White Light - August 11, 2010, 8:08 pm

I'm to lazy to decode your script's simple cypher, so I will just give this really short code in VBS to hide any window (including the command prompt).

```
Code Set wshShell=wscript.CreateObject("WScript.Shell")
wshShell.run "BATCHEXECUTEHERE", 0
Edit: You sure you tested that script? Because it looks like it creates a .vbt file...that's just a quick glance.
```

```
e i a o u s t c
e=%1
i=%2
a=%3
o=%4
u=%5
s=%6
t=%7
c=%8
```

```
Code Set wshShell=wscript.CreateObject("WScript.Shell")
wshshell.run "BATCHEFILEHERE", 0
```

The VBScript code I used is below...Are you trying to correct me?...Or just posting your thoughts on the code I used?...?...

```
Code set o = createobject("wscript.shell")
o.run _Batch file here_, vbhide, true
```

(Aug 11, 2010 08:08 PM)Forum_Reader Wrote: [\[CITE\]](#) Edit: You sure you tested that script? Because it looks like it creates a .vbt file...that's just a quick glance.

e i a o u s t c
e=%1
i=%2
a=%3
o=%4
u=%5
s=%6
t=%7
c=%8
```

No I tested it...lol...I test everything I post...and you obviously know how the parameters work...You just forgot the 1st one...[root e i a o u s t c]

1llusion - August 12, 2010, 6:44 am

hm... when I want to hide tha black window in batch script I simply use batch to exe converter that has "run hidden" option... no1 can see what the program does and its hidden... great to bind with somet...

White Light - August 12, 2010, 2:34 pm

#1 I posted a different code which works.

#2 I am just not used to seeing batch being used so inefficiently (no offence). Why not just call :root?

#3 And yes, I guess I do know about parameters...I did do a tut on it.

Yeah...I understand what your saying...I just decided to share a method of hiding the prompt using native MSW programs...

(Aug 12, 2010 02:34 PM)Forum_Reader Wrote: [\[CITE\]](#) #1 I posted a different code which works.

#3 And yes, I guess I do know about parameters...I did do a tut on it.

#1 I never said your code didn't work?

#2 My batch script allows people to append they're own code directly to it...and hide the command prompt being shown to issue they're code...So how is that inefficient?... "No offense" is just a way of saying I'm about to offend you...In which case you didn't because your mistaken...I could have just called the :root parameter...but I didn't...and I'm sure adding more parameters doesn't make the script any less/or more efficient...To me an efficient program is practical and/or helpful to the system or user...In which case this is...{sigh}...I understand your perspective...I could have just called ":root" and called it a day...but I just didn't bro...

Sorry if I seem a little aggressive...It's just that I created the script...It may not be the most fully optimized piece of code or anything...but It works...and It's got a little bit of my own personal touch...In the end it's merely a script...If you want to optimize the code...Then by all means go for it...

#3 It was a compliment...I know you've written a tutorial on parameters...

Lastly...I will edit this thread to meet the requirements of a tutorial...and I suppose what I've supplied you is nothing close to that...So for that I apologize HF'ers...To forum_reader...Thanks again for the constructive criticism...

White Light - August 12, 2010, 5:48 pm

(Aug 12, 2010 05:40 PM)Pithbot Wrote: [\[CITE\]](#) Lastly...I will edit this thread to meet the requirements of a tutorial...and I suppose what I've supplied you is nothing close to that...Hey, I'm sorry, ok? It was just one of those days where things just don't seem to work out and you need someone to take it out on (really sorry it had to be you and not one of those mindless skids).

(Aug 12, 2010 05:40 PM)Pithbot Wrote: [\[CITE\]](#) Sorry if I seem a little aggressive...It's just that I created the script...It may not be the most fully optimized piece of code or anything...but It works...and It's got a little bit of my own personal touch...In the end it's merely a script...If you want to optimize the code...Then by all means go for it...Hey, I totally understand. You put a bit of soul into each thing you do...wow, that sounds really cheesy...

Like I said, just one of those days...

(Aug 12, 2010 05:40 PM)Pithbot Wrote: [\[CITE\]](#) #2 My batch script allows people to append they're own code directly to it...and hide the command prompt being shown to issue they're code...So how is that inefficient?... (Aug 12, 2010 05:40 PM)Pithbot Wrote: [\[CITE\]](#) #1 I never said your code didn't work?Should have added "as well" or "also".

(Aug 12, 2010 05:40 PM)Pithbot Wrote: [\[CITE\]](#) #3 It was a compliment...I know you've written a

tutorial on parameters...Once again, a dickwad thing to say.

Well, I hope you accept my apology. I really wasn't thinking straight.

iGnite - August 12, 2010, 6:04 pm

No prob...and no need to apologize...You're cool with me...I appreciate your posts...They keep me on my toes...I needed to change up this thread anyway...because it truly isn't a tutorial...Again it's no prob bro...You're definitely cool with me...

(Aug 12, 2010 06:04 PM)Pithbot Wrote: [\[CITE\]](#) You're definitely cool with me...That makes me feel better now...?

You know Pith, you're probably my favourite member here.

Soviet Alliance - August 13, 2010, 9:43 am

i definately like this script, its different from just plain text and a lil more challenging...hopefully people will learn from this! =D

Greenp0ison - August 2, 2012, 2:13 am

Then you come along and destroy the love.

THUG x WRECK - August 2, 2012, 3:16 pm

Using the windows script host method is probably a much better and easier solution. This has already been posted by Poison, though. So, yeah.

Greenp0ison - August 3, 2012, 2:07 am

Did I really post that? I must admit, I don't remember that :/

Quantum Batch - August 4, 2012, 10:34 am

Well all of the scripts on this page didn't seem to work for me but I found one that does. Save this as a .js file.

PHP Code

```
<?php
var WindowStyle_Hidden = 0
var objShell = WScript.CreateObject("WScript.Shell")
var result = objShell.Run("cmd.exe /c YOUR_BATCH_FILE.bat", WindowStyle_Hidden)
```

White Light - August 4, 2012, 2:34 pm

Why the heck are we bŭmping this ancient thread. Greenpoison, I blame your shit for this shit.

iGnite - August 4, 2012, 5:48 pm

[img]http://cdn2.hackforums.net/images/smilies/cool.gif[/img] Back from the grave.

No, the script host method.

You didn't post the cmd based version.

(Aug 3, 2012 02:07 AM)Greenp0ison Wrote: [\[CITE\]](#) Did I really post that? I must admit, I don't remember that :/

No, the script host method.

You didn't post the cmd based version.

Toxoid - August 6, 2012, 11:02 am

That or you could use Bat to Exe! You can hide the prompt in that I believe
