Thread: [Having trouble finding find an Admin page of a site](#)

**Sky Priority** - February 19, 2020, 6:59 pm

Hey folks,

My friend and I set up some fake sites to do a mini ctf, I almost have him I have the user/decrypted pass but i can find the damn admin site. I've tried scripts such as adfind, but it is not locating it.

Any tips?

Thanks,

**Mortox** - February 19, 2020, 7:01 pm

Which are you trying to get, php, html? Admin pages have different index names like HK

Try /admin.php

Or keep searching database for it

**BigJoe7413** - February 20, 2020, 6:27 pm

/admin.php

/administrator.php

/login

admin.(domain.com)

or force a 401 by trying to access something restricted like /logs

Thanks,

If your friend followed CMS standards, dirb should help you out.

On Kali,

PHP Code

<?php

apt update

apt install dirb

dirb http://targetdomain/

PHP Code  
<?php  
apt update  
apt install dirb  
dirb http://targetdomain/

I prefer wfuzz to scan for directories

Yeah, actually wfuzz is much faster. I only really use dirb because it's recursive haha

If you want speed use anything written in Go (Gobuster).

try search google about features  
spider

from tool burpsuite
