Thread: [Qubes USB to USB install](#)

AnonymousGhostMachine - February 20, 2020, 8:24 am

Need help with the Qubes 4.0.3 and help installing it from one usb to the other usb.

One USB stick is a 64gb and that will act as the installer.

The other USB stick is a 1024mb = 1TB Micro USB inside a SD card also inside a SD CARD reader and acting a one USB sitck.

Trying to install the Qubes 4.0.3 from one onto the other and also after setting op wifi as a separate bus qube.

If you can help with this then it would be very helpful to millions of people around the world.

Legacy will enabled in bios only.

Why not just install it from a regular computer, sorry but i haven't tried Quebes yet, but i guess you can just burn the iso normaly into the Usb, why try to complicate it even more, my advice would be to make things simpler, that way it'll be easier.. Hope you find a solution for your problem ...
