Thread: [WPA Password decrypting 15 usd per AP](#)

zmanz - February 20, 2020, 9:08 am

Hi.

I wonder if someone could help me crack one or a few routers for an assignment?
I've tried to use hashcat with probable list 1k - 10 million also tried GPUHASH.me basic search.
I've also tried reaver/bully Pixie does not work and any bruteforcing just activates lockouts.

No luck what so ever. I'm guessing its not passwords with words in a word list, but some kind of default password.

Is there anyone here who's had experiance with these routers or could help me crack em?

I'd be willing to tip 15 USD per WPA key cracked.
Thank you.

SSID: TN_24GHz_692751

Do you have access to these networks? I may be able to help you; do you need access to these networks or do you want to sniff traffic from these networks?
