Thread: [Portforwarding issue in VMWARE](#)

poonampandey108 - February 21, 2020, 3:07 am

Hello,

Description

I am using VMWARE workstation, in that I have created VM windows 10. Now I want to test RAT.

Problem

but I am unable to listen on port in Vmware

Action Taken

- 1) created account in Portmap.io
- 2) installed openvpn in vmware windows 10
- 3) virus and protection turn off in vmware windows 10
- 4) firewall turn off in vmware in windows 10
- 5) Created rule for receiving inbound request in vmware windows 10
- 6) I turn on openvpn by importing configuration file from Portmap.io and did mapping as well in vmware windows 10
- 7) Now, I am trying to see my check wether my port forwarded successfully on canyouseeme from my vmware windows 10

Result

I am unable to forward my port/listen on desired port in canyouseeme

Looking for help, can anyone guide me what I did wrong? or what I missed?

Thanks in advance.

Change your VM Network adapter to Bridge from NAT and it will start working
